

How to export scenes from Hue to Siri

Philips Hue offers the possibility to export your favorite Hue scenes as Siri Voice Commands.

This requires your bridge to be paired to Siri. (refer to "How to pair your bridge to Siri")

You can export the names of your lamps to control them via Siri Voice Commands (refer to "How to control Hue lights with Siri")

Exporting a scene

We have four favorite scenes on our dashboard that we want to export to Siri:

- Sunset
- Water
- Beach
- Party

Note:
For the best results we recommend that you use names for scenes in the same language as you set Siri to.

Go to the Settings menu to set up voice controlled scenes.

Scroll through the list to select and export your favorite Hue scenes.

Tap a scene to export: a checkmark appears when successful.

You can now recall these scenes via Siri!

Note:
At this moment Siri only allows control of scenes that contain a maximum of 12 lamps.

Edit the name of a scene

Enable the edit mode by tapping it.

Provide a new name. (Example: "Party")

Note:
For the best results we recommend that you use names for scenes in the same language as you set Siri to.

Navigate to 'Settings > Siri Voice Control' and select 'Scenes'.

The exclamation mark indicates that the name has changed. Tap the scene to update the Siri Voice Command.

Note:
Siri Voice Commands must be unique. Duplicate names are not allowed and will be rejected when exporting.

Available Siri Voice Commands

This enables the following Siri Voice Commands:

- [scene name] ("Beach")
- Set [scene name] (e.g., "Set Party")
- [scene name] scene (e.g., "Sunset scene")
- [scene name] mode (e.g., "Water mode")
