Notes

1. There are two ways to adjust the current:
 - a. Using a resistor between Rset2 & SGND leads
 - i. Any through hole or SMD resistor with >0.25W and >20V can be used as RSET between Rset and SGND pins.
 - ii. Driver will default to 1100mA when Rset is left open.
 - b. Using SimpleSet programming (visit www.philips.com/simpleset for details)
2. The driver is by default set to Rset2.
