# Studio and location lighting

Light in television sculpts, it adds depth and perspective to the scene. It's as critical in directing the audiences' attention or influencing their emotions, just as any camera movement, acting or editing does.

Thronecast, Sky TV

Lighting designer: Iain Davidson

Lighting supplier: Richard Martin Lighting

# Anchorman to actionman and everything inbetween lights for star quality

Philips Entertainment Lighting has an exciting new line-up of multi-talented fixtures for television studio and location lighting. Our strong heritage in producing camera ready fresnels and panel lights has extended to include softlights and weatherproof portable location fixtures. We have transitioned to LED technology but retained the required attributes and performance of tungsten.

Today's demands for camera ready lights has extended beyond the traditional studio or location set ups. More and more we are experiencing multi-platform transmissions – live opera and theater performances are now regularly recorded; the instantaneous, on the spot reporting with live streaming is now not only the norm but a given – this has all led to the need for fixtures which have excellent light quality, are versatile, adaptable, robust, economical and controllable.

## Panel lights

Adaptable, even light source that is versatile and functional, lightweight in construction and for the most part used for close-up, modelling and general lighting of subjects on camera.

## TV fresnels

Produce a fairly soft edged beam whose width is controlled by the spot/flood mechanism operated by moving the LED/reflector combination with respect to the lens. Used as a modelling light, keylight or backlight.

### Studio Panel MKII

Philips Selecon Studio Panel MKII is a compact, lightweight LED luminaire designed for both studio and location use. Available with a high TLCI rating in tunable white 3200-5600K or fixed whites 3200K and 5600K. The battery power input uses industry standard batteries and the Studio Panel MKII is available with a range of accessories.

### 200F

Philips Strand 200F is a medium power LED TV fresnel, providing the light output equivalent to a 1000W tungsten fresnel, designed specifically for TV broadcast lighting. A very high TLCI rating provides an excellent quality of light, perfect for the camera.

The range includes two color temperatures, 3200K and 5600K in both manual and pole operated formats. Perfect for studio use.

## Softlights

Softlights are less controllable than fresnels but more subtle and less intense. They are designed to balance the lighting and to lessen the shadows on faces.

# Panel lights: Studio Panel MKII

Philips Selecon Studio Panel MKII is a compact, lightweight LED luminaire, designed for both studio and location use. They feature calibrated white color temperature settings of 3200K and 5600K, making them ideal for a wide range of lighting applications.

Requiring just 50 Watts, these luminaires operate on AC or DC voltage. The battery power input allows location operation using industry standard batteries. Additional holographic diffuser accessories provide beam angle control with minimal light loss.

## Features

- Compact lightweight design.
- 50 degree beam angle.
- 8 or 16-bit control from any DMX512-A control source.
- Local rotary control for intensity.
- Variable version features 9 built-in color temperature pre-sets including 3200K and 5600K.
- Variety of accessories (all accessories are sold separately).
- Battery or mains operated.
- Three year limited warranty.

# TV fresnels: 200F and 400F

Philips Strand 200F and 400F, broadcast-grade fresnels, provide a world class LED alternative to the traditional 1kW and 2kW tungsten fresnels, reducing the power consumption by approximately 80%.

Using an innovative optical and thermal design, the 400F's 10" lens, provides a 12-45° beam angle delivering more than 2000 lux at a 10m distance.

Equipped with a smart Strand control user-interface, the color LCD display with 8 soft keys and decoder wheel enables intuitive operation. A USB port also allows for future firmware upgrades or performance data file downloads.

Both the 200F and 400F LED TV fresnels consist of both a tungsten and daylight version. Either can be pole-operated or manually-operated, with a pole-operated focusing knob at the front and manual knob at the rear.

# Softlights: 150S and 300S

Philips Strand 150S and 300S are new slimline LED studio softlights designed specifically for TV broadcast lighting. Higher than 90 TLCI and consistent cool white – 5600K and warm white – 3100K in a soft even output. Conventional cooling without fans to offer a quiet operation environment during TV program recording.

A large illuminance output area, 50° beam angle for a smooth even output to a far distant object. High performance optical system formed by a high quality PMMA convex lens and frost panel filter. With on board full color LCD display, all necessary data such as DMX address, Intensity, Cd value, CRI, LED/tungsten mode, Curve type, CCT and internal temperature can be viewed at all times. With the simple “touch and turn” design, all parameters can be easily adjusted.

The range complements the 200F and 400F LED TV fresnels.
