Energy-efficient LED technology to create safe, secure environments.
And very often, lighting needs to remain on 24 hours a day, seven days a week, leading to a high use of energy and increased costs. The challenge for the owners and managers of parking facilities is therefore twofold: how to create a warm and reassuring environment while also saving on costs and maintenance.

The answer comes in the shape of GreenParking – the adaptable and straightforward solution from Philips Lighting.

With this system in place, there is no need to compromise on safety in order to achieve savings. In fact, running costs can be reduced by up to 80% with the use of energy-efficient LED technology. You’re assured of high-quality light levels, but can still make a positive contribution to the environment and cut your electricity bills. What’s more, with long-life LEDs, maintenance is cut to a minimum too – another way of saving on cost as well as reducing inconvenience. And with luminaires that are waterproof and easy to clean, the system is protected against dust and emissions from vehicles.

Car parks have never been the easiest areas to light effectively. They are, of course, a potentially hazardous environment for both drivers and pedestrians, which means that good visibility and safety are always a top priority.

In summary, as well as providing safety and reassurance for visitors to your garage, GreenParking is a low maintenance, wireless lighting system that also works perfectly as a retrofit solution, complies with regulations and delivers outstanding energy savings.

This brochure explains the GreenParking system in more detail.
Full illumination at a fraction of the cost

In the past, you had to leave your car-park lighting running at full output, just to meet the safety requirements. Which meant paying to illuminate your parking lot, even when it wasn’t being used. Not anymore.

GreenParking uses presence detectors and programmable LEDs to deliver lighting on demand – 100% illumination when vehicles or pedestrians enter a zone, dimmed lighting when no one is around. So you still get a car park that feels bright, welcoming and safe, but without the huge energy bill.

Always one step ahead
With sensors in every area of the car park, GreenParking lets you create ‘zones’ – essentially, groups of networked luminaires. When the sensors detect motion, the light increases to 100%, ensuring people can always see clearly as they move around the parking lot.

Light it your way
GreenParking gives you total flexibility. You can configure the zones according to your car park’s layout, set how long lighting in each zone remains at 100%, and decide the dimming level. As a result, the GreenParking system becomes tailored to your particular space and requirements.

Both drivers and pedestrians benefit from uniform illumination as they move around the parking facility. Lights only come up to 100% when presence is detected. Otherwise, they dim to a fraction of full illumination.

Example zone configurations

- Zone at background
  dimmed due to no presence
- Zone at 100% light
  due to presence
The simplicity of wireless

Sensor system works in every area

The GreenParking sensors are suitable for some of the toughest environments. They detect movement anywhere within a particular zone, regardless of whether we’re talking about entrances and exits, junctions or longer corridors. As a driver turns a corner, the light is already up at 100% in the area ahead.

Within GreenParking we offer two systems:

A wireless system with external sensors and a wireless system with an integrated sensor in the luminaire. Depending on your situation, you select the best option.

We save 50-60% on energy, maintenance costs, and created an optimum sense of safety through the flexible dimming system.

Inge Reindersma, Usselstein Council.
Parking Eiteren IJsselstein, the Netherlands

GreenParking works immediately on installation

GreenParking is a complete lighting and controls system that works the moment it’s installed:

• Easy to install in new-build and retrofit installations – simply replace existing lighting, point for point
• Wireless system – ZigBee communication model uses low-power devices to transmit data over long distances
• Quick to configure using a remote control
• Intuitive to operate

GreenParking wireless with internal sensor
Pacific LED luminaire with integral HF movement sensor and large detection area.
With the remote control you can easily adjust your settings.
The Pacific LED waterproof luminaire is the ‘efficiency champion’, as it saves up to 80% on energy and has limited maintenance costs thanks to its long lifetime. Designed to cope with extreme conditions, it also comes with diverse optics.

GreenParking wireless with external sensors
Pacific LED luminaire with external sensors for ceiling or wall mounting, including IP65 protection box for harsh environments.
With the remote control you can easily adjust your settings.
The Pacific LED waterproof luminaire is the ‘efficiency champion’, as it saves up to 80% on energy and has limited maintenance costs thanks to its long lifetime. Designed to cope with extreme conditions, it also comes with diverse optics.
The existing fluorescent fittings – 2x 36W T8 luminaires – were at the end of their life. Also, there were no lighting controls, so the car park was lit around the clock – which meant wasted energy and unnecessary costs. Initially, Bygg-Gota Goteborg AB was going to replace the fluorescent lamps with LED fixtures without lighting controls. Then the company discovered Philips GreenParking with wireless movement detection.

The conventional fluorescent fittings were replaced with energy-saving Pacific LED luminaires. The garage was then divided into zones, with wireless movement detection sensors mounted on each of the 5 floors.

“The LED lighting produces a crisp white light, making the garage feel very safe and secure,” says Nemanja Brankovic, Project Manager at Bygg-Gota Goteborg.

The wireless movement detection sensors ensure lighting only activates when it’s needed – which means Bygg-Gota Goteborg AB is only paying for energy it’s actually using.

“When a car enters the garage, lighting increases to 90% of its full output,” adds Brankovic. “And when it leaves, lighting dims to 10% after 2 minutes.”

Our solution

The GreenParking system was quick and easy to set up. The company used the existing cabling for the luminaires, and because the sensors are wireless, no additional cables were needed – which minimized installation costs.

The challenge

The existing fluorescent light fittings – 2x 36W T8 luminaires – were at the end of their life. Also, there were no lighting controls, so the car park was lit around the clock – which meant wasted energy and unnecessary costs.

Sustainable and scalable savings

We anticipate energy savings of 80%, which will greatly reduce the total cost of ownership. In fact, we predict the system will pay for itself within four years.”

Nemanja Brankovic | Project Manager Bygg-Gota Goteborg AB
Efficient system, fast payback

Our calculations showed that upgrading the car park lighting would deliver a payback within 1.5 years through energy savings, so this was clearly a very worthwhile investment.”

Brian Cole, Operations Director, ExCeL

*ExCeL’s reduced payback time was due to a very energy inefficient legacy system.

Speedy return on investment

While the initial outlay is higher than a traditional solution, the savings start from day one. Typical payback time for the Philips GreenParking system is just three years, as the combined efficiency of LED plus controls and zoning results in up to 80% energy and cost savings. Constant light output – adjusting over-lighting by dimming down to the correct lumen level – from installation can create up to 10% additional energy savings.

Return on investment:
over a 10 year period

The graph below shows the cost savings possible over 10 years by comparing the installation and running costs of the GreenParking system against traditional fluorescent:

GreenParking: €150,000

Possible savings: 80% in 3 yrs
Payback time: 3 yrs

*1x58w TL-D installation versus GreenParking system over 10 years, on 450 luminaires in typical covered parking garage at €0.12 energy price.
The lighting in the parking garage of the Globen Shopping Center needed total renovation. Property owner, Klövern AB, wanted a ‘future-proof’ solution with smart lighting controls. Step forward GreenParking.

"Our aim was to recoup our investment in seven years. With the huge energy savings we’re making with GreenParking, we anticipate doing that within five to six years."

Lennart Lindkvist, Energy Manager at Klövern AB

The lighting system produces bright, well-distributed white light – making the garage feel safe and secure.

"We replaced the luminaires and kept the cabling, which saved significant labor and material costs."

Lennart Lindkvist, Energy Manager at Klövern AB

Klövern AB has also greatly reduced its maintenance costs – the LED modules won’t need replacing for 15 years.

"We save as much energy as 17 houses consume per year."

Lennart Lindkvist, Energy Manager at Klövern AB

The challenge

The three-floor, 9,000 square meter garage has 1,500 parking places. The original lighting installation was divided into four zones per floor, each lit with traditional batten luminaires, each housing a 1 x 58W T8 fluorescent tube. When a car entered the garage, the lighting operated at 100% of its full output for two hours, before switching off completely. The lighting quality was poor, and the luminaires were starting to fall apart.

Our solution

Klövern AB installed GreenParking: Pacific LED luminaires with wireless controls which were paired with wireless movement detection sensors to create a complete, controllable lighting system.

For the new lighting installation, the parking garage was divided into 13 zones per floor with 120 wireless movement detection sensors mounted in strategic locations. The lighting system produces bright, well-distributed white light – making the garage feel safe and secure.

"We replaced the luminaires and kept the cabling, which saved significant labor and material costs."

Lennart Lindkvist, Energy Manager at Klövern AB

"When a car or pedestrian enters the programmed zone, the lighting comes on at 90% of its full power. When this car or pedestrian leaves the area, output drops to 10% after 2 minutes. We’ve cut energy consumption by more than 50%."

Klövern AB has also greatly reduced its maintenance costs – the LED modules won’t need replacing for 15 years.

Bright and secure lighting, lower energy bills

## Professional services: pre installation

We offer help at the planning stage through our unique professional services approach – by doing an initial audit and recommending a design solution to ensure best outcomes.

### Audit
- **On-site data collection and data analysis**
  - We make recommendations for improving performance, with a clear baseline, and ensure customers receive the most up-to-date information on the lighting installation.
  - Lead
  - Scope
  - Data collection
  - Data analysis

### Consulting
- **Solution design arising out of data analysis**
  - We come up with the most cost-effective design, incorporating data from the field, and implement the design according to customer’s precise specifications.
  - Solution design
  - Business case
  - Solution implementation
  - Sign off

## Lifecycle services: post installation

And post-installation we offer a menu of options to choose from, with three packages, from Essential to Premium and Premium+ depending on your needs.

### Essential Package
- **Protecting your investment**
  - Helpdesk and service ticketing
  - Preventive maintenance via field support
  - Corrective maintenance via remote call support
  - Spare parts and additional services at discounted prices

### Premium Package
- **Ensuring hassle-free and budgeted operation**
  - Everything in the Essential Package
  - Comprehensive maintenance via trained service engineers for on-site service activities
  - Spare-part kit and replacement for failures

### Premium+ Package
- **Optimize performance and meet your business objectives**
  - Everything in the Premium Package
  - Documentation and project information in a customer portal
  - Ongoing user training

---

**Services delivered the right way, your way**

Lighting is in our DNA. We’ve been designing and delivering lighting installations for more than 120 years, so one thing you can bank on is peace of mind. How do we work? We’re big on flexibility. We’ll package our support around exactly what you need.
