Workshops

2015 Canada Philips Lighting Application Center Course Description

Lighting Applications **Workshops**

These 2-day workshops address the principles and practicalities of integrated lighting solutions for specific situations.

We take an interactive, experience-based, and participant-centered approach, using full-scale and hands-on demonstrations. Participants observe lighting in action, measure and evaluate lighting alternatives, and practice applying the content. Lighting systems are considered as an integrated solution, including sources, luminaires, and controls.

Workshop Agenda

- Understanding and applying recommended practice
- The critical qualities of light
- Illuminance selection
- Appropriate lighting systems

Who Should Attend

This program is aimed at the needs of those with two-to-five years of lighting experience and the desire to augment their lighting knowledge and know-how.
