2015 U.S. Philips Lighting Application Center Course Description

## Lighting Solutions **Workshop**

The one-day Lighting Solutions workshop focuses on advanced lighting technology to improve facility performance, reduce energy consumption, and lower operating cost.

Full-scale lighting experience, hands-on demonstrations, and supporting information are presented in a non-commercial format that emphasizes broadly applicable principles and techniques. Participants are encouraged to share best practices in this interactive environment.

### Workshop Topics

- The Human and Business Impacts of Lighting
- Managing the Total Cost of Ownership
- Evaluating LED and advanced fluorescent and HID lighting systems
- Meeting the controls requirements in today's energy codes

### Learning Objectives

At the completion of the Lighting Solutions Workshop, participants should be able to:

- Identify issues of lighting quality in your facilities
- Calculate the lighting costs, using simple "hands on method"
- Observe and evaluate the effects of key lighting solutions

### Who Should Attend

These workshops are designed for facilities and energy professionals, their consultants, and supply chain. The goal is to help visitors make better decisions regarding lighting, energy, and human performance. This workshop is by invitation from your local Philips sales organization.
