

In 2014, the US government will be phasing in new efficiency standards for some popular lamps that you may purchase to use in your facility. These standards affect many general service incandescent and general service linear fluorescent lamps among others. These regulations are not product bans, but they demand that new lamps meet certain performance requirements. Depending on the lamp, these could include: lifetime, maximum wattage, and/or minimum lumen per watt requirements.

Overview of lamps affected by legislation

General Service Incandescent Lamps

Once implemented, new efficiency standards will set maximum wattages and minimum rated average lifetimes for many general service incandescent lamps in four popular lumen ranges. Some of the most popular include the 100W, 75W, 60W and 40W A19 shaped incandescent lamps. Depending on the lamp and state, these standards were phased in from January 1, 2012 through January 1, 2014.

Lamps covered by these efficiency standards include A-Shape, Decorative Candles, Globes and Post Lights.

General Service Fluorescent Lamps

As part of the Energy Independence and Security Act of 2007, the DOE was directed to undertake new energy conservation standards rulemaking for general service fluorescent lamps. In 2009, the DOE issued its rules, which went into effect in July 2012 and established minimum lumen per watt standards for a number of popular fluorescent lamps. DOE granted a hardship waiver for 70CRI T8 lamps to be manufactured in the US until July 2014. Fluorescent lamps that must meet these new standards include:

- 2' medium bipin U-shaped lamps with rated wattage $\geq 25W$
- 4' medium bipin $\geq 25W$
- 4' T5 miniature bipin straight shaped with wattage $\geq 26W$
- 4' T5 miniature bipin straight shaped with wattage $\geq 49W$
- 8' recessed, double contact rapid start HO lamps
- 8' single pin instant start slimline lamps, with a rated wattage ≥ 52

Frequently asked questions

Q: Do the new energy efficiency requirements ban certain lamps?

A: These new rules are not product bans. Rather they demand that new lamps meet certain performance requirements that, depending on the lamp, could include: lifetime, maximum wattage, and/or minimum lumen per watt requirements.

Q: When do these new requirements take effect?

A: General service incandescent lamp legislation was phased in from 2012 to January 1, 2014. General service fluorescent lamp legislation goes into effect July 14, 2014.

Q: Is there a possibility that new energy efficiency regulations will be repealed?

A: At this time, Philips expects that the energy efficiency requirements will remain in place.

Q: In general, what kinds of replacement lamps are available for me to purchase?

A: Philips has a wide variety of options that meet new efficiency requirements. Depending on the product, you may be able to use a halogen, CFLi, fluorescent, or LED replacement lamp.

Q: How can I tell if the specific Philips lamps I purchase for use in my facility are affected by new efficiency rules?

A: Philips has created an online tool that will help you identify whether or not your lamp is affected by legislation and DOE rulemaking.

Q: If the lamp I purchase for use in my facility is affected by new rules, where can I learn about replacement options?

A: The same online tool that helps identify affected products can also give you more information about replacement and upgrade options.

Q: Are there exemptions to these new requirements?

A: Yes, there are a number of exemptions and exclusions. Visit us on the web to learn more.

Q: What is the web address for me to learn more about legislation and find out if my facility's lamps are affected?

A: This information can be accessed at:
