Product introduction

Certified interface tools for MultiOne SimpleSet[®]

Philips has expertise in configuration of drivers but is no specialist in tooling for scanning in production or development environment

Philips searched for a professional complementary partner for this type of tooling -> FEIG

FEIG has the experience and is a company with worldwide service and supply chain.

Philips created the driving software for two tools, tested this for the portfolio of SimpleSet[®] drivers, and made them certified for MultiOne SimpleSet[®]

Ordering of these tools must be done via FEIG.

Philips will arrange a few samples (in case of emergency) via the heat quarters.

We will keep in 2015, the *LCN9600 MultiOne SimpleSet[®] interface* available (as engineering sample) for customers (first testing) or internal purpose (demo).

- 2 operation modes: FEIG ISO Host Mode & Scan Mode

SHORT DESCRIPTION

The handheld readers ID ISC.PRH101/102 are designed for contactless data exchange with common ISO 15693 transponders. They can be used for those applications, read ranges up to 13cm* (PRH102-B) resp. up to 20cm* (PRH101-A/-USB) are required.

Due to different interfaces the handheld readers can be integrated in existing systems easily. So they are suitable for several applications in retail, logistics and industry.

The anti-collision function allows the handheld readers identification of up to 30 transponders simultaneously. With a switchable voltage on the antenna line a LED located in the antenna can be operated.

For programming host applications on mobile devices FEIG offers DLLs for different systems like Pocket PC, CE3.0, CE.NET, Windows-, Linux- and Java systems.

*Read range depends on the transponder size.
Here made statements relate to an inlet size of 76 x 45 mm
