Philips PL-L 80W Compact Fluorescent Lamps offer exceptional light output while minimizing energy and maintenance costs.

**Outstanding lumen performance**
- 6000 lumens per watt
- 82% more lumens than PL-L 40 watt compact fluorescent lamps
- 93% lumen maintenance

**Long life**
- 20,000-hour rated average life
- Extended relamping cycles provide reduced maintenance costs

**Easy to experience**
- For use with electronic and dimming circuits
- Fits in smaller luminaries
- Same size as PL-L 40 watt compact fluorescent lamps

* **See footnotes on reverse side.
### WARNING:

These lamps can cause serious skin burn and eye inflammation from short wave ultraviolet radiation if outer envelope of the lamp is broken or punctured. Do not use where people will remain for more than a few minutes unless adequate shielding or other safety precautions are used. Certain lamps that will automatically extinguish when the outer envelope is broken or punctured are commercially available. This lamp complies with FDA radiation performance standard 21 CFR subchapter J. (USA:21CFR 1040.30 Canada:SOR/DORS/80-381)

If the outer bulb is broken or punctured, turn off at once and replace the lamp to avoid possible injury from hazardous short wave ultraviolet radiation. Do not scratch the outer bulb or subject it to pressure as this could cause the outer bulb to crack or shatter. A partial vacuum in the outer bulb may cause glass to fly if the envelope is struck.

**WARNING:** The arc-tube of metal halide lamps are designed to operate under high pressure and at temperatures up to 1000ºC and can unexpectedly rupture due to internal or external factors such as a ballast failure or misapplication. If the arc-tube ruptures for any reason, the outer bulb may break and pieces of extremely hot glass might be discharged into the surrounding environment. If such a rupture were to happen, THERE IS A RISK OF PERSONAL INJURY, PROPERTY DAMAGE, BURNS AND FIRE.

**WARNING:** These lamps can cause serious skin burn and eye inflammation from short wave ultraviolet radiation if outer envelope of the lamp is broken or punctured. Do not use where people will remain for more than a few minutes unless adequate shielding or other safety precautions are used. Certain lamps that will automatically extinguish when the outer envelope is broken or punctured are commercially available. This lamp complies with FDA radiation performance standard 21 CFR subchapter J. (USA:21CFR 1040.30 Canada:SOR/DORS/80-381)

1) Average life under specified test conditions with lamps turned off and restarted no more frequently than once every 3 operating hours.
2) Approximate initial lumens. The lamp lumen output is based upon lamp performance after 100 hours of operating life under standard laboratory conditions.
3) Design lumens are the approximate lamp lumen output at 40% of the lamp’s rated average life. This output is based upon measurements obtained during lamp operation on a reference ballast under standard laboratory conditions.

Footnotes from front:

* When comparing a PL-L 40W with 3300 design lumens and 2970 initial lumens to a PL-L 80W with 6000 design lumens and 5400 initial lumens.

** Average life under specified test conditions with lamps turned off and restarted no more frequently than once every 3 operating hours.
