The Philips Advance Xitanium range of linear LED drivers is designed to provide OEMs with ultimate flexibility. These models are compatible with standard 0–10V dimming systems to deliver reliably smooth dimming performance down to a minimum of 1%. Enabled with SimpleSet technology, these drivers offer the needed flexibility and performance for the application with precise tuning of drive currents, selectable dimming curves and adjustable minimum dimming levels. With wide operating windows, slim profile and simple current adjustability, the drivers make it easy for luminaire manufacturers to design linear fixtures with desired lumen levels to suit the application.

#### **Notes**

- 1. 1. There are two ways to adjust the current.
  - a. Using a resistor between Rset2 & SGND leads.
    - i. Any through hole or SMD resistor with >0.25W and >20V can be used as RSET between Rset and SGND pins.
    - ii. Driver will default to 2000mA when Rset is left open.
  - b. Using SimpleSet programming (Visit www.philips.com/simpleset for details.)
- 2. The driver is by default set to Rset2.

#### **Electrical Specifications**

All the specifications are typical and at 25°C Tcase unless specified otherwise.

#### **Driver Output Window**

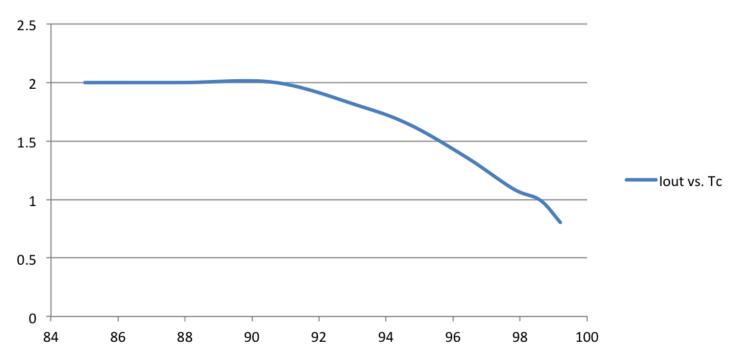

#### **Notes**

- 1. Factory default output current is 2.0A.
- 2. For dimming to a minimum level of 1% the output current setting through AOC should be  $\geq$  0.5A.

#### **Inrush Current Info**

| Vin      | Ipeak | T (@ 10% of Ipeak) |  |
|----------|-------|--------------------|--|
| 120 Vrms | 34A   | 118µS              |  |
| 277 Vrms | 64A   | 115µS              |  |

Inrush current is measured at peak of the corresponding line voltage. Source impedance per NEMA 410.
