Fixture-Mount

# Fixture control made simple

Philips EasySense fixture-mount sensors

# The easy way

## to add controls to every fixture

As more and more commercial lighting customers look to unlock the potential of connected lighting, fixture manufacturers are **looking for seamless, cost-effective ways to integrate sensors** to make it all possible.

Traditional built-in lighting sensor designs use a bulky two-box system that is expensive and cumbersome to design in and assemble. And remote-mounted ceiling sensors are unsightly and require extra wiring in the ceiling, adding cost and opportunities for installation errors.

The Philips EasySense fixture-mount sensor—with its small form factor—is a cost-effective and flexible solution to integrate occupancy sensing, daylight harvesting and other advanced functionalities into today's fixture designs.

Whether the application calls for simple per-fixture control, extended room-level control, or a fully networked lighting system, EasySense provides a full range of solutions to meet immediate energy-saving goals and code compliance requirements as well as tap into emerging smart lighting uses. Networked light fixtures provide the ideal fabric for the IoT.

# The Philips EasySense fixture-mount sensor portfolio

## SNS200 for advanced grouping

The EasySense SNS200 combines occupancy sensing, daylight harvesting and task tuning with advanced grouping features:

- Per-fixture control and grouping to wireless switches, no gateway required
- Auto-off/manual-on (vacancy sensing) and auto-off/partial-on
- Common pre-sets; works out of the box
- Philips field apps for configuring, grouping and task tuning
- Occupancy sharing—Program peripheral fixtures to stay at task or background level if occupancy is detected elsewhere in the group
- Scene setting—Create presentation mode for a conference room (e.g., set light level low near the screen while keeping higher level in the back of the room)
- DLC qualification—Listed in the DLC Qualified Products List (QPL) for networked lighting control (NLC) systems

## SNS300 for networks

The SNS300 is designed for applications with centralized lighting control through Zigbee wireless technology.

- Compatible with qualified third-party lighting control systems or building management systems (BMS)
- Provides fixture-specific information for smart lighting uses cases such as remote energy monitoring, scheduling and demand response

## SNH200 for high bay

By providing greater coverage and rugged reliability for demanding high bay environments, the SNH200 delivers energy savings for warehouse (and similar) applications.

- Allows for 15- to 45-foot mounting
- IP65 rating against dust and water
- Sub-zoning and occupancy sharing (zone with motion goes to full task level while sub-zones are maintained at background light level)
- Simple grouping via IR

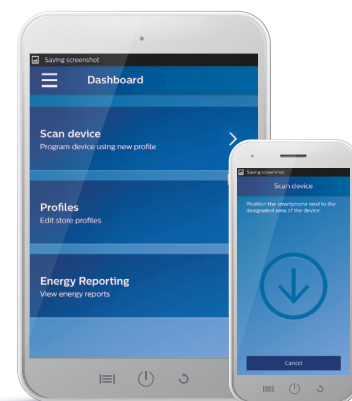

## Philips field apps (for SNS200 and SNH200)

Philips field apps allow programming of occupancy/daylight sensing parameters and fine-tuning of lumen levels during installation.

- EasySense NFC—For programming sensors during installation when the smartphone can be placed next to the sensor
- EasySense IR—For grouping and programming sensors after installation from floor level; applicable wireless switches can also be added to the group

**To use Philips field apps, register at [philips.com/easysense](http://philips.com/easysense). After registering, download “Philips field apps” from the Google Play Store.**

The Philips EasySense fixture-mount sensor portfolio is an ideal solution for many applications, such as:

<b>Offices</b> 	<b>Schools</b> 
<b>Healthcare</b> 	<b>Industrial</b> 
<b>Government</b> 	<b>Retail</b> 

## OEMs: Foundation for a connected future

Incorporate Philips EasySense fixture-mount sensors as part of a standard fixture portfolio while saving design time and money:

- One fixture design can work for energy savings and code compliance strategies, from per-fixture to fully networked solutions
- Compatibility with Philips Advance Xitanium SR LED drivers eliminates the need for auxiliary devices and time-consuming configuration issues; no power packs required
- Simple two-wire connection from driver to sensor reduces design-in complexity and additional components that add to overall costs

## Specifiers/ESCOs: Flexibility for your choice of controls

Specify Philips EasySense fixture-mount sensors as part of energy-saving and code-compliance strategies without hindering project time or aesthetics:

- Integrated sensors blend within the luminaire, leaving the ceiling uncluttered
- Occupancy sensing and daylight harvesting in one device
- Makes per-fixture controls practical and cost-effective; eliminates hassle with ceiling wiring

A close-up photograph of two women with dark hair, smiling and looking towards the left. They appear to be in a professional setting, possibly a meeting or presentation. The woman in the foreground is wearing a dark top and a necklace, while the woman in the background is wearing a blue polo shirt. The lighting is soft and focused on their faces.
