# 1. Product introduction

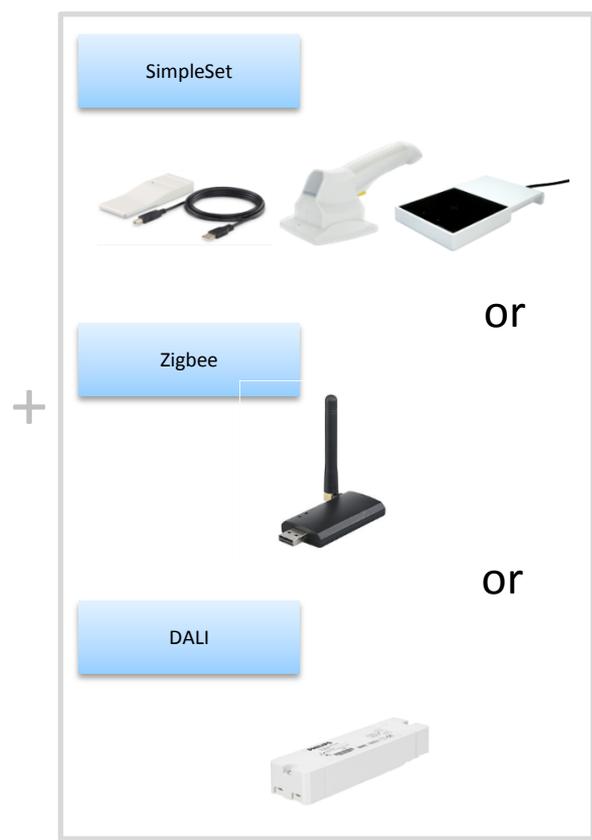

## Basic blocks

1.

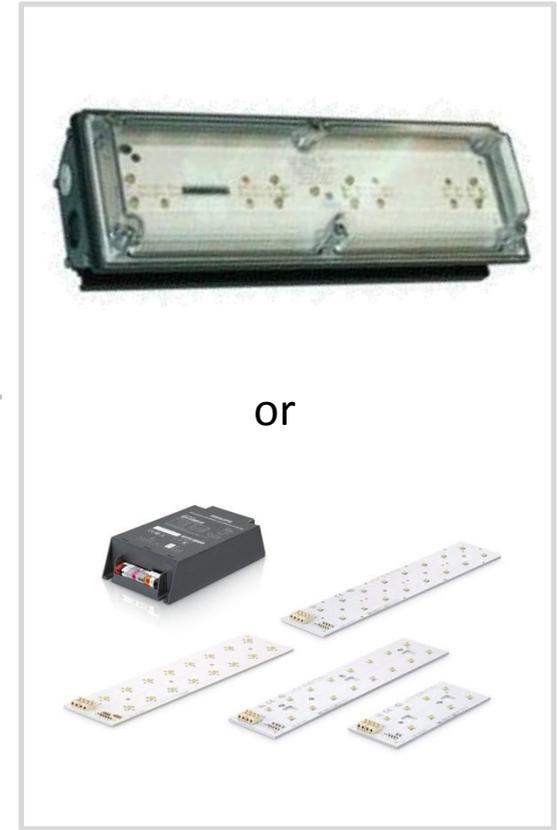

PC with unique  
MultiOne Software

2.

Certified interface tool

3.

Philips drivers with  
MultiOne Technology

## 2. Basics

### PC with our MultiOne Software

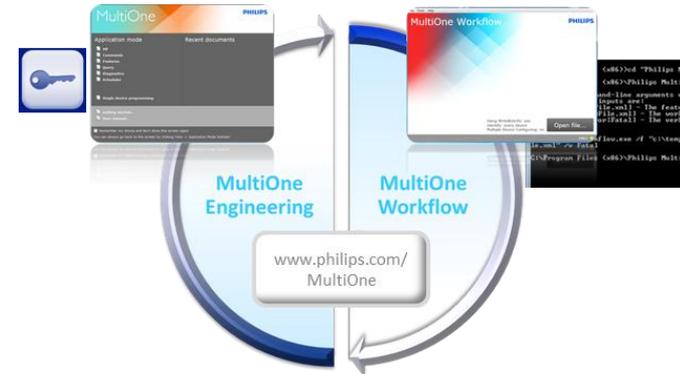

Laptop or PC with conditions:

- Microsoft Windows 7, Windows 8 or Windows 8.1
- One or multiple USB 2.0 port(s):
- At least 35 MB of free disk space
- *Using Windows Xp will be phased out end of 2015*

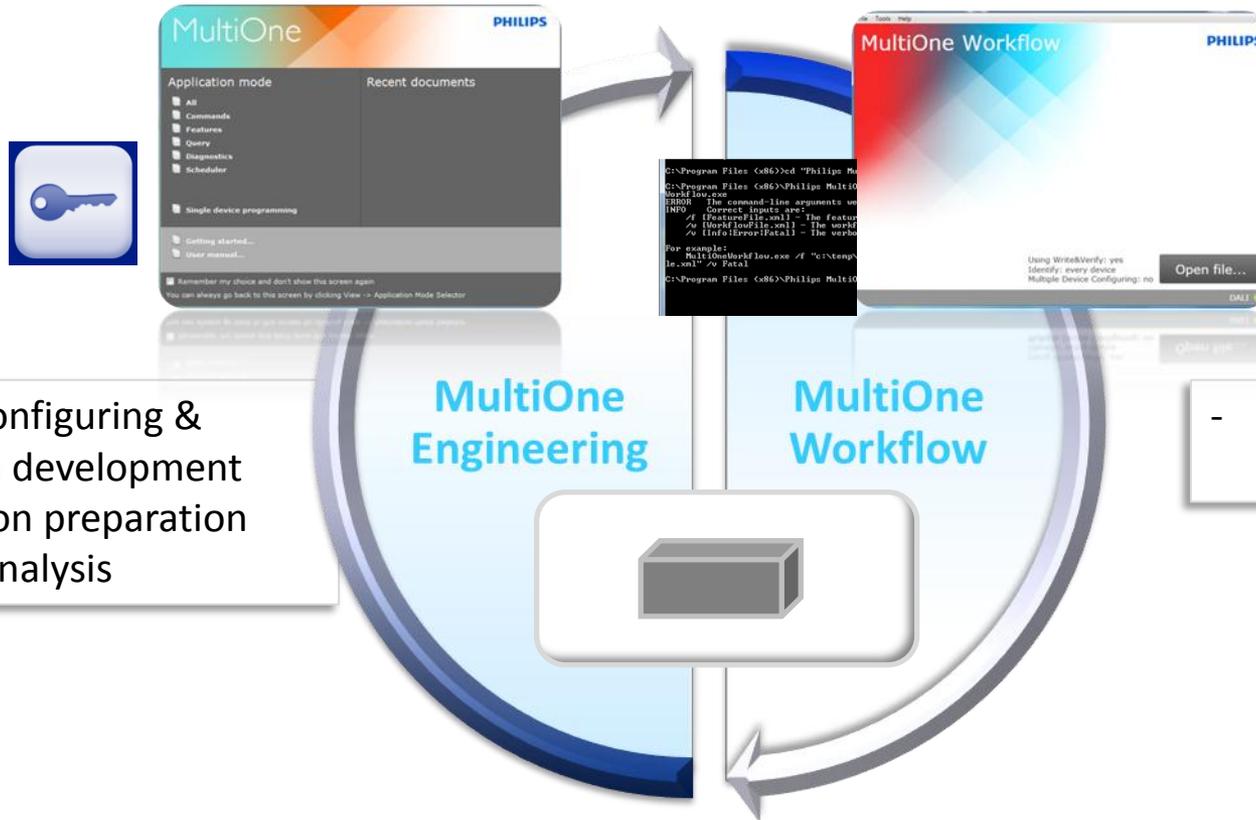

Software from website:

- Free download [www.philips.com/MultiOne](http://www.philips.com/MultiOne)
- Software for different application (status on wk 28)
  - MultiOne Engineering 2.9
  - MultiOne Workflow2.2 / CommandLine
- Protected via User Software Key
- One software
  - all type of Interfaces
  - total product portfolio
- Automatic upgrade

# 3. MultiOne System

*Different type of Software packages*

- Device configuring & testing in development
- Production preparation
- Quality analysis

- Configuring in Production

- 2 versions:
- GUI
  - CLI

Released version  
MultiOne Engineering 2.9

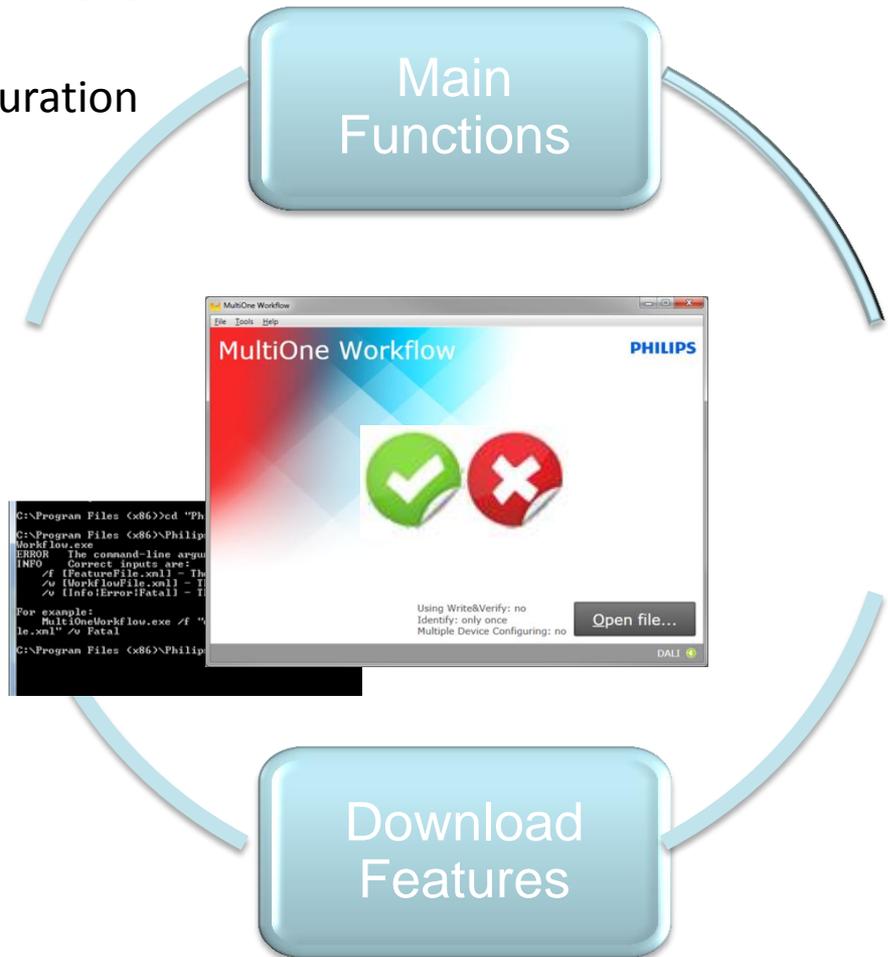

Released version  
MultiOne Workflow 2.2

# 4. MultiOne configurator

## *MultiOne Workflow / Command Line*

### Benefits :

- Special developed for the production environment
- Easy to operate
- Single or multiple device (only DALI) configuration
- Create own level of robustness
- Simplified error messages

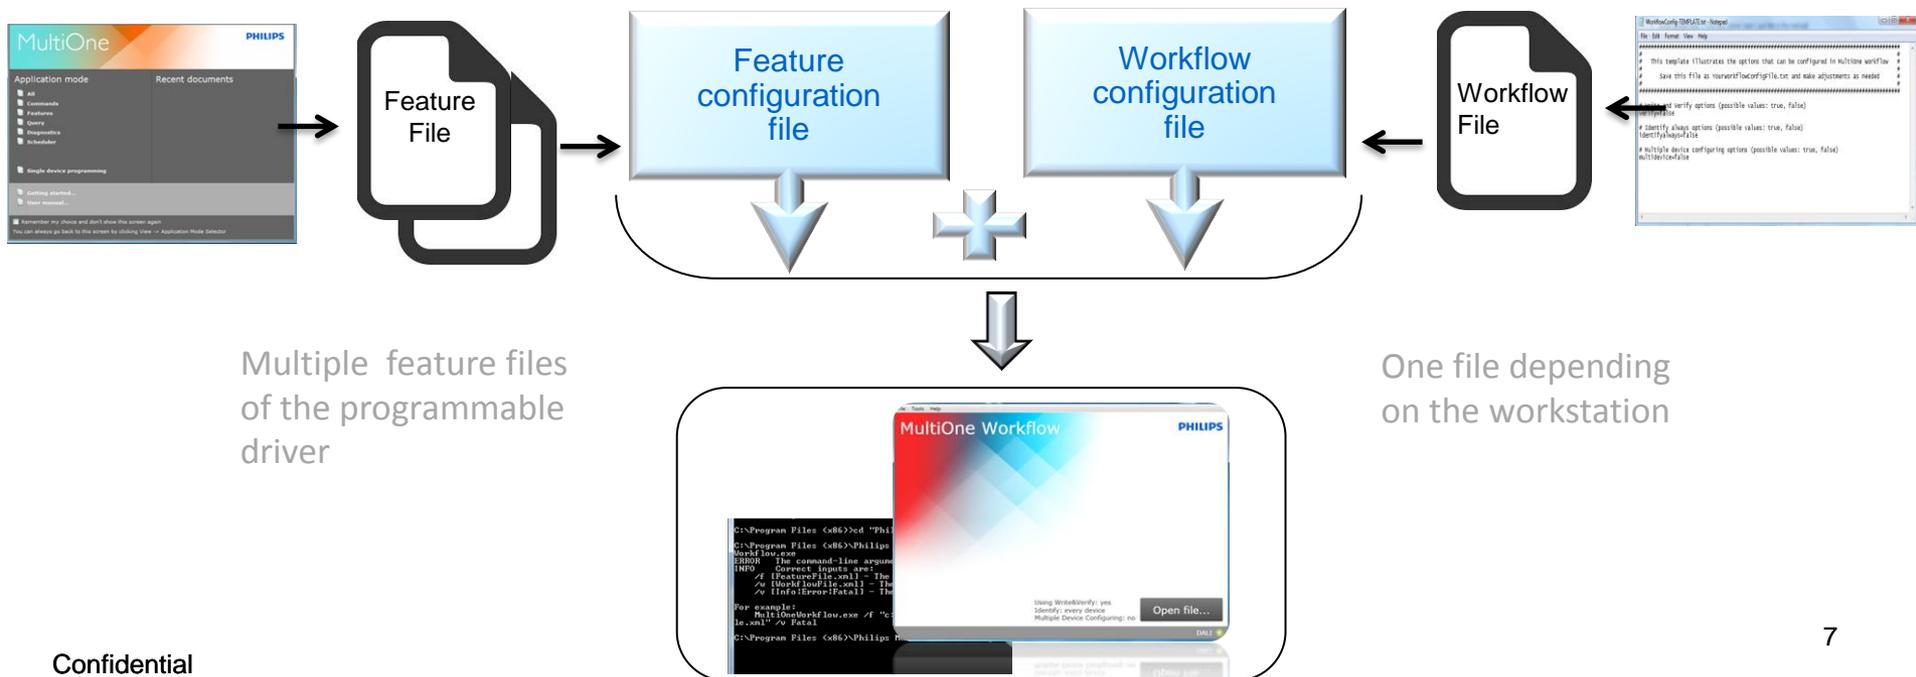

# MultiOne configurator

## MultiOne Workflow inputs

### Benefits of the “file input” :

- Flexibility in settings
- Choice : Robustness <-> Speed
- Easy to operate
- Use of files created with MultiOne Engineering

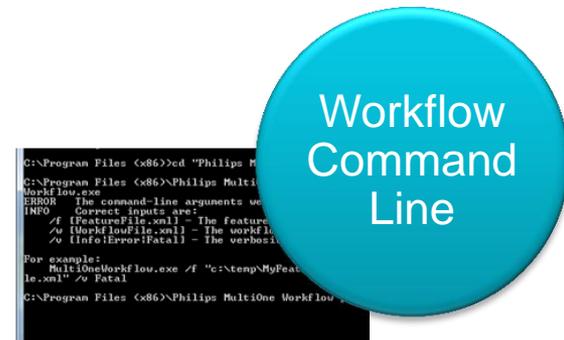

# MultiOne configurator

## MultiOne Workflow - 2 solutions

Configuring in Production:

-> **2 different solutions possible**

- 1. Simple quick installation -> GUI**
- 2. Total integration -> Command Line**

MultiOne Command Line :

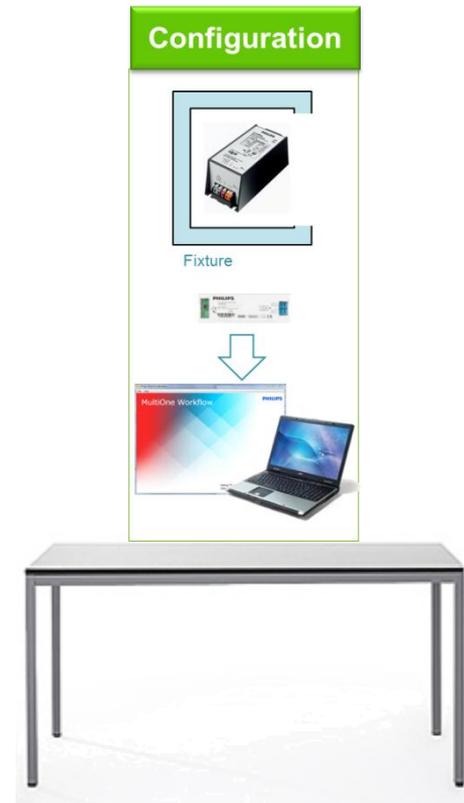

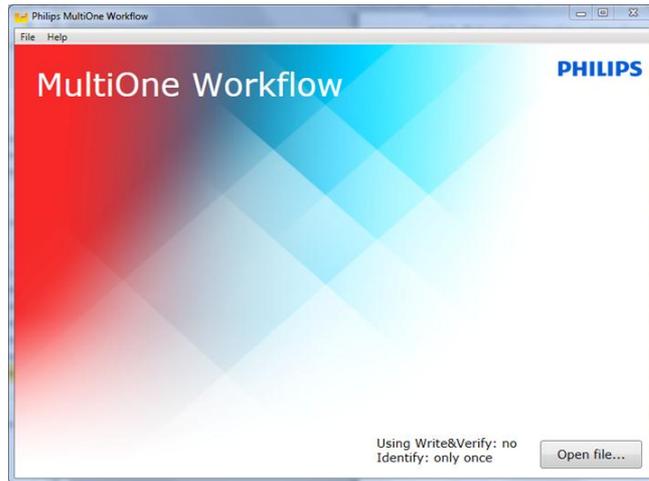

- runs from the Windows command line (console, MS-DOS prompt)
- is installed in the same directory as MultiOne Workflow

# MultiOne configurator

*Workflow - solution: graphic user interface*

Configuring in Production, separate unit

- Simple, not integrated, production station

# MultiOne configurator

## Workflow - solution: Command Line Interface

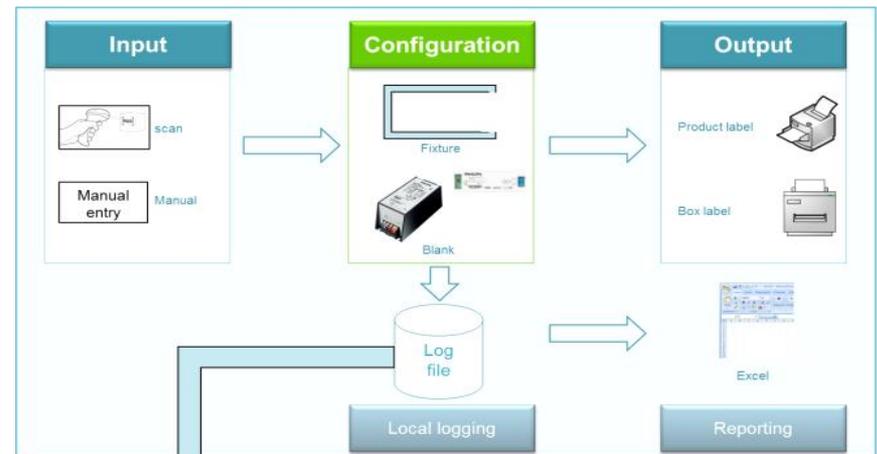

### Configuring in Production

- Use integrated station with printer, ...

⇒ MultiOne Command Line integrates into customer's tool chain

⇒ Customer want to integrate/automate configuring with testing and factory systems (like SAP)

⇒ MultiOne Command Line is only used for writing settings from feature file

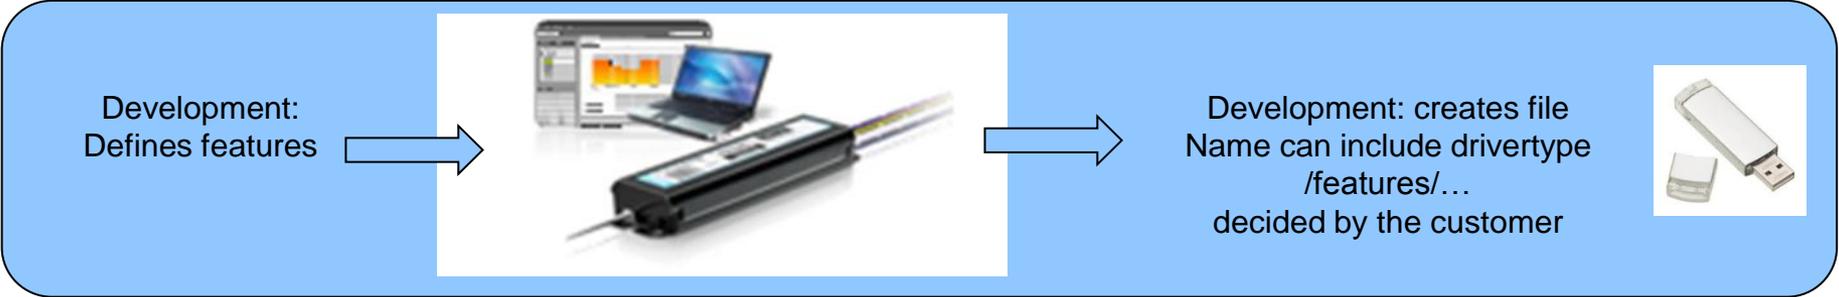

```
C:\Program Files (x86)>cd "Philips M
MultiOneWorkflow.exe
ERROR The command-line arguments w
INFO Correct inputs are:
/F (FeatureFile.xml) - The featur
/O (WorkflowFile.xml) - The workf
/V (Info/Error/Fatal) - The verb
For example:
MultiOneWorkflow.exe /F "c:\temp\
le.xml" /v Fatal
C:\Program Files (x86)\Philips Multi
```

# MultiOne configurator

## Summary: usage (concept)

Development environment -> functionality and diagnostics

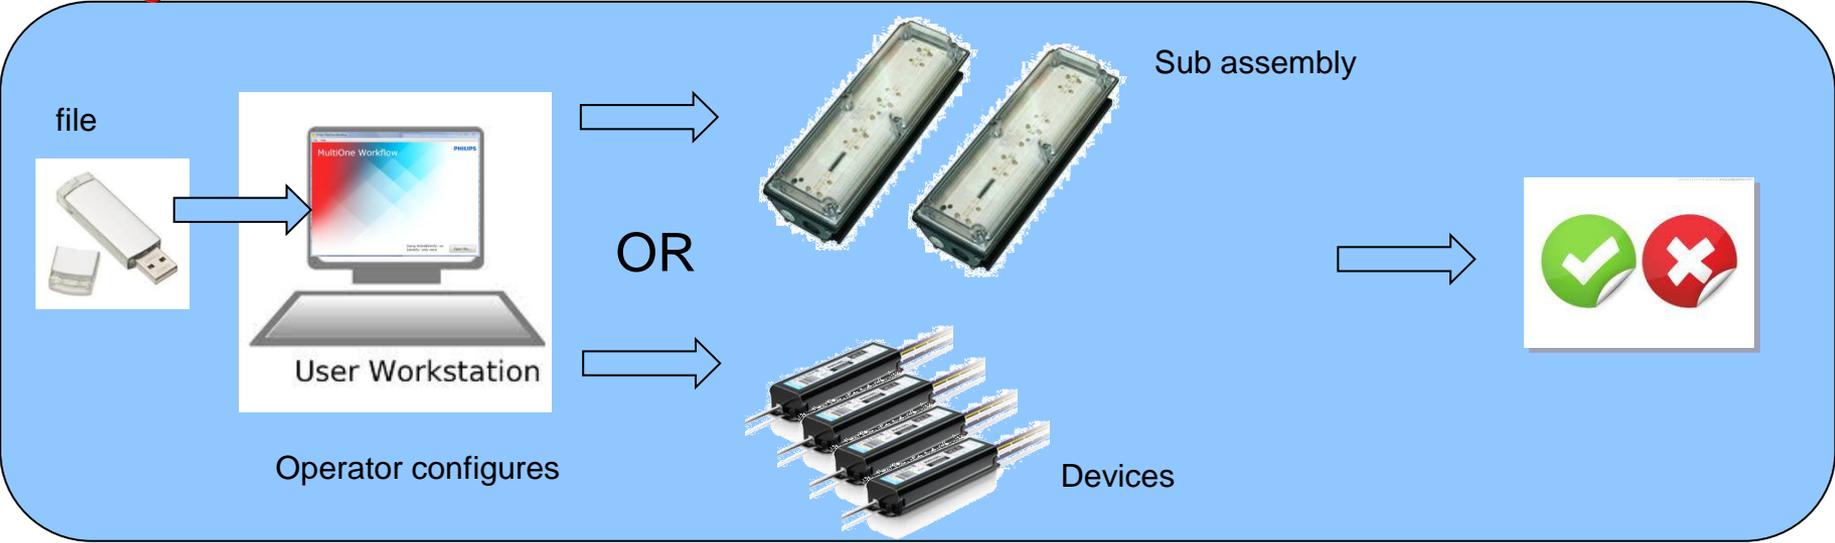

Feature file creation

Configure driver

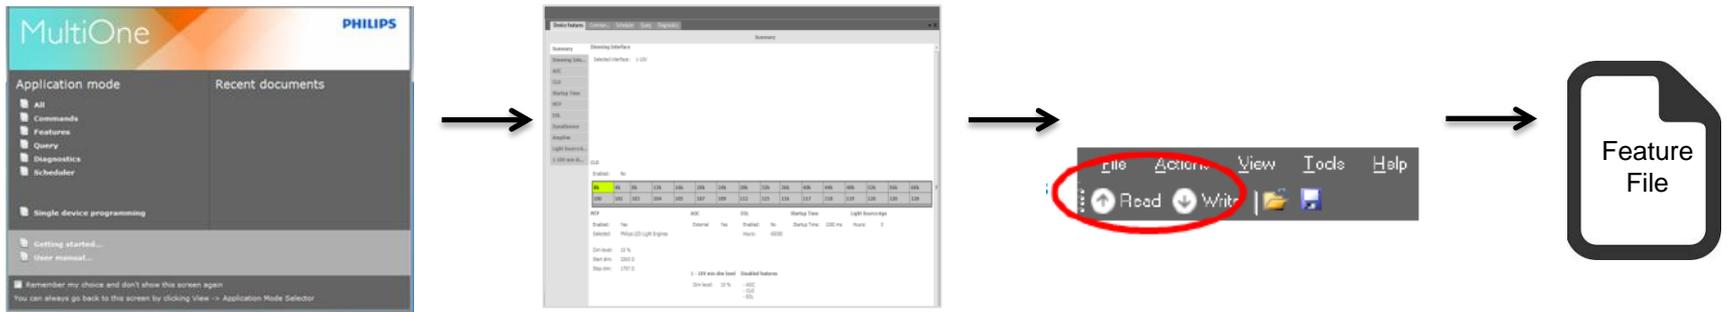

Production environment -> quick and robust configuration of driver

# MultiOne configurator

*Creation :Feature configuration file*

First step: create feature file with MultiOne Engineering

Advice:

- > use latest MultiOne Engineering to generate Feature file
  - > parameters and features -> linked to product (see manual)
- > **Feature configuration file** :
  - > to link the file to the product, color the check box before saving (see manual)
  - > location of file on central system

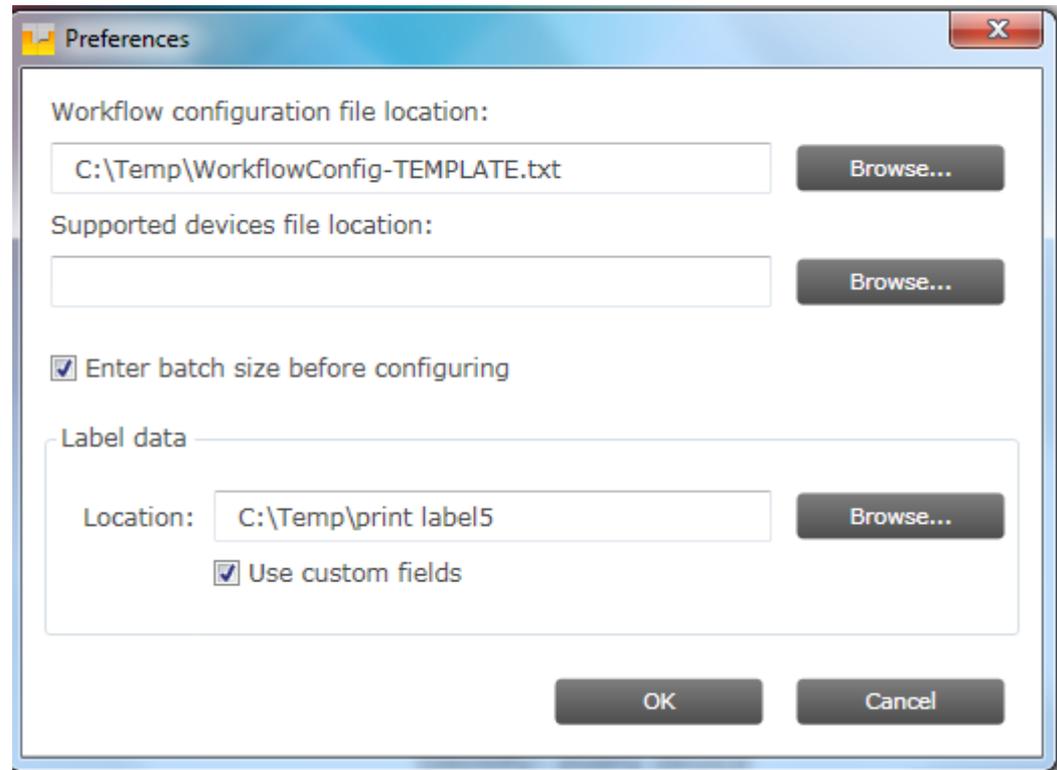

# MultiOne configurator

*Creation: Workflow configuration file*

Second step: choose your settings with MultiOne Workflow to organize your workstation

Station settings that are possible:

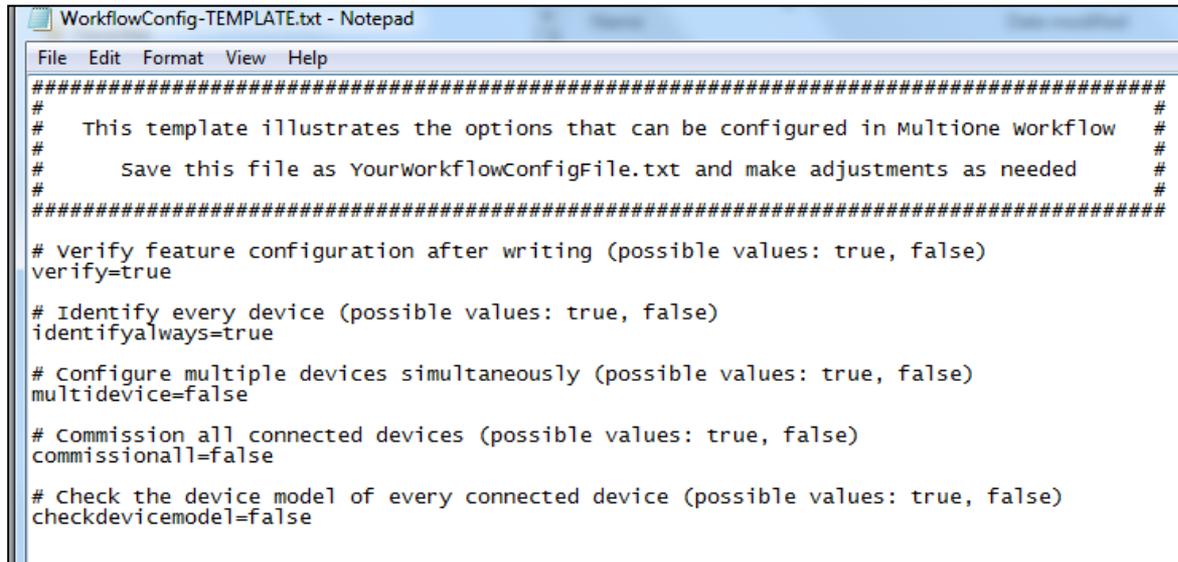

1. Workflow configuration
2. Supported devices
3. Batch size
4. Label or data printing
5. Custom fields

# MultiOne configurator

*Creation: Workflow configuration file*

Third step: change the workflow configuration file settings

```
WorkflowConfig-TEMPLATE.txt - Notepad
File Edit Format View Help
#####
# This template illustrates the options that can be configured in Multione workflow #
# Save this file as YourworkflowConfigFile.txt and make adjustments as needed #
#####
# verify feature configuration after writing (possible values: true, false)
verify=true
# Identify every device (possible values: true, false)
identifyalways=true
# Configure multiple devices simultaneously (possible values: true, false)
multidevice=false
# Commission all connected devices (possible values: true, false)
commissionall=false
# Check the device model of every connected device (possible values: true, false)
checkdevicemodel=false
```

Advice :

- > configure the products in the workstation: single, multiple device, verify,...
- > Run system -> see settings on screen
- > feature configuration file name visible on the screen
- > **workflow configuration file**
  - > once set (one file) , fixed way of working in station
  - > simple error messages on screen

# MultiOne configurator

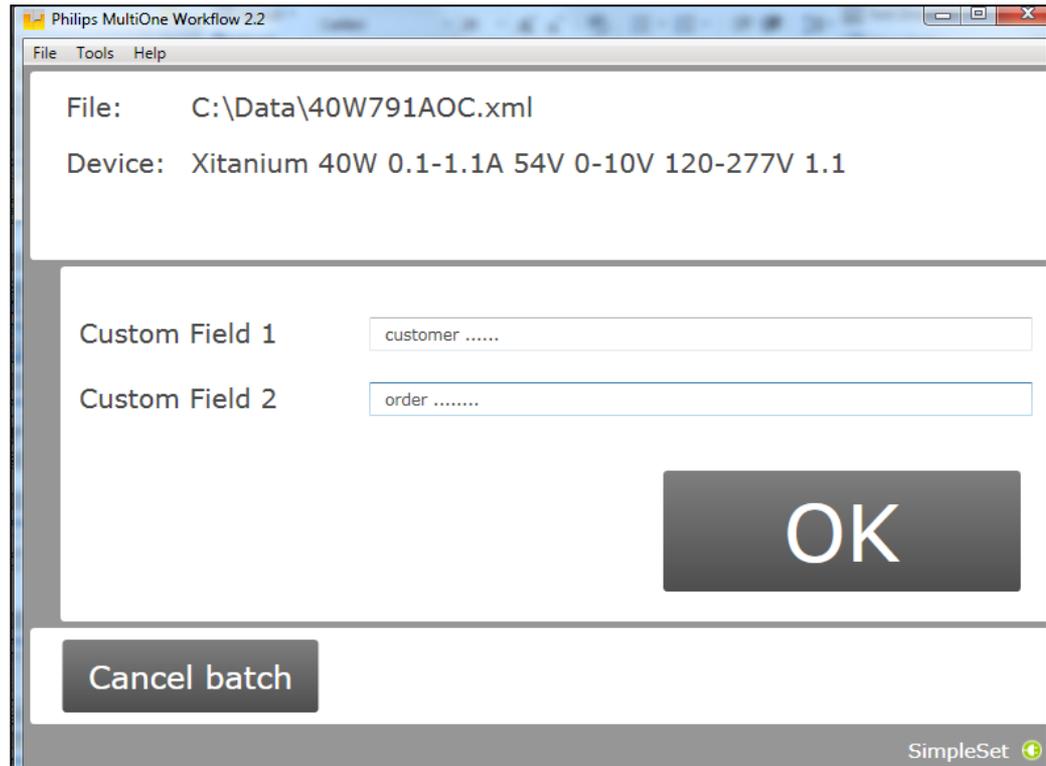

*Creation: Workflow configuration file*

Fourth step: after opening the feature file, enter

- the custom fields (example customer, order number,...)
- batch size

Name of the file and driver  
are visible

Start configuring

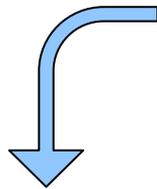

# MultiOne configurator

*Creation: Workflow configuration file*

Fifth step: csv files are created with all the information of the configured drivers on the address

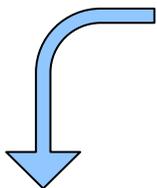

Possible to use for  
-printer  
-reporting

Label data

Location: C:\Temp\print label5

Use custom fields
