LUMILEDS

The in-organic Solid State Lighting value chain

LumiLeds: focus on die and packaging

Philips: focus on modules and systems

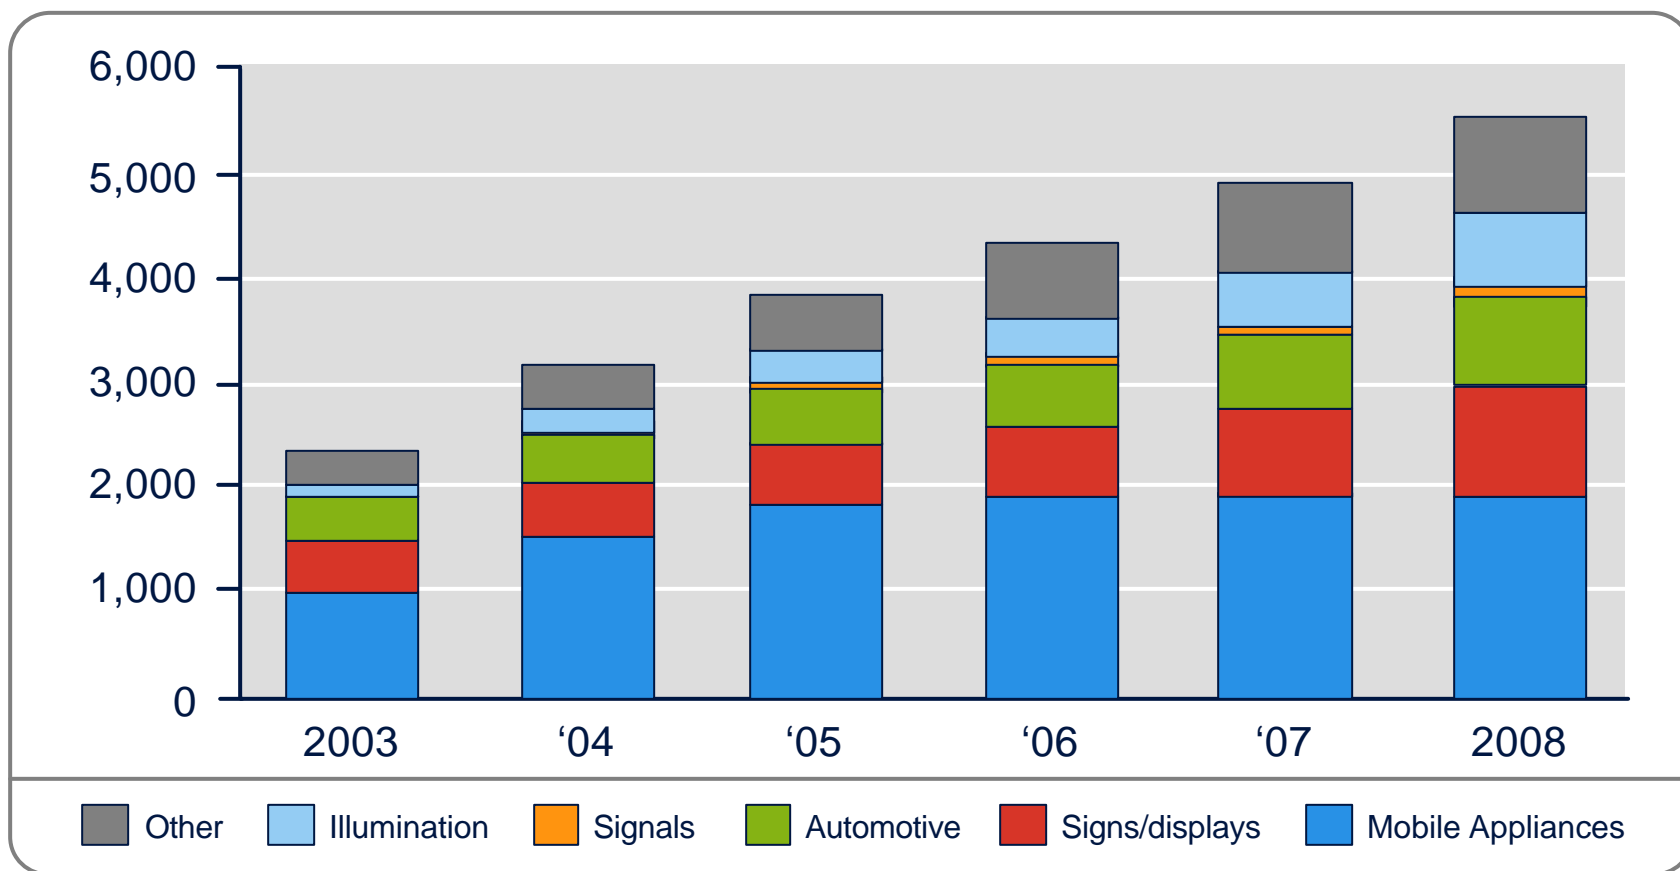

LumiLeds leadership in high power LEDs

- Joint venture with Agilent Technologies established in 1999
- Headquarter in San Jose, California
- Industry leadership in high power die and packaging (LUXEON platform)

Market Forecast – packaged LEDs

Revenues in \$ million

Philips Solid State Lighting modulesenabling OEM luminaires concepts

Exploiting Solid State features and benefits.....

Light experiences & effects

- Dynamic colors

Embedded

- Robust & long life

Total Cost of Ownership reduction

- Low energy & maintenance

.....resulting in
“increased number of light points”

Spring

User interface

Controlling “increasing number of light points” requires “intelligent lighting modules”

- Control Light quality
- Color mixing
- Dynamic over time
- Store preferred settings in memory
- With an easy (intuitive) user interface

Philips Solid State Lighting leveraging Philips Electronics technical capabilities

- Philips Research for advanced technology development
- Philips Semiconductors for packaging of modules & systems
- Philips Design for intuitive user interfaces
- Philips Software Development for control-intelligence

.....as well as
leveraging Philips Electronics market positions

- Philips Consumer Electronics for viewing experiences
- Philips Medical for creating caring environments
- Philips Lighting for light application and product know how

Consumer Electronics: Viewing experience

Medical: Ambient Experience / RSNA , Chicago

Lighting: Growth in professional

..... and consumer applications

Leading to Profitable Growth

- Today's installed luminaire base will continue to drive conventional lamp replacement
- Luminaire sales will convert gradually to Solid State
- Solid State creates new lighting possibilities with more initial light points per application
