Trilogy EV300 evolution of care
simple, portable, reliable, adaptable

February 2020
Introduction

The Trilogy EV300 ventilator provides:

Invasive and non-invasive positive pressure ventilation for the care of patients ≥2.5 kg through adults.

The ventilator can measure, display, record, and alarm SpO₂, FiO₂, CO₂, respiratory rate, and pulse rate data when integrated with the appropriate accessories.

The ventilator is suitable for use in the hospital transport setting*

*Not MRI compatible
Simple
Portable
Reliable
Adaptable
Simple
User-friendly platform
Patient-friendly performance
8” touchscreen
Simple

Quick access 100% oxygen flush button to deliver for 2 minutes
Simple

To prevent accidental therapy changes, use the **touchscreen lock**.

This is a temporary touchscreen lock, which can be changed back by tapping anywhere on the screen and following the onscreen instruction.

For automatic touchscreen lock, go to the Options screen then Device Options and select Automatic Touchscreen Lock On.
Simple

**Quick start up.** Ideal body weight (IBW) is calculated based on height and gender.

This information is used to establish default therapy and alarm settings, including tidal volume and alarms based on tidal volume. This information also limits setting ranges.
Simple

Adjust alarms as needed.
## Simple Modes and settings: Trilogy 202 to Trilogy EV300

<table>
<thead>
<tr>
<th>Trilogy 202</th>
<th>Trilogy EV300</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>AC</td>
<td>A/C - VC</td>
<td><strong>Assist Control (Volume Control) mode</strong> provides volume-controlled mandatory or assist-control breaths. The set inspiratory time applies to all breaths.</td>
</tr>
<tr>
<td>CV</td>
<td>A/C - VC</td>
<td>If you want to replicate <strong>CV mode</strong> where the ventilator triggers and cycles all breaths then set the trigger type to OFF.</td>
</tr>
<tr>
<td>PC</td>
<td>A/C - PC</td>
<td><strong>Assist Control (Pressure Control) mode</strong> provides pressure-controlled mandatory or assist-control breaths. The set inspiratory time applies to all breaths. <em>Optional AVAPS.</em></td>
</tr>

**Modes and settings:** Trilogy 202 to Trilogy EV300

<table>
<thead>
<tr>
<th>Trilogy 202</th>
<th>Trilogy EV300</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>S</td>
<td>PSV</td>
<td><strong>Pressure Support Ventilation mode</strong> is patient-triggered, pressure-limited, and flow-cycled. The patient determines the breath rate and timing so it is recommended to set back-up ventilation. <em>Optional: AVAPS and Ti min/max.</em></td>
</tr>
<tr>
<td>S/T</td>
<td>S/T</td>
<td><strong>Spontaneous/Timed</strong> is a bi-level therapy mode where each breath is patient-triggered and patient-cycled, or ventilator-triggered and ventilator-cycled.</td>
</tr>
<tr>
<td>CPAP</td>
<td>CPAP</td>
<td>In <strong>Continuous Positive Airway Pressure mode</strong>, all breaths are spontaneous with the CPAP set pressure delivered in both inhalation and exhalation.</td>
</tr>
</tbody>
</table>
| AVAPS-AE    | AVAPS-AE      | **AVAPS-Auto EPAP mode** automatically adjusts pressure support, to maintain the target tidal volume, and EPAP, to maintain a patent airway, within the set min/max ranges; and simplifies the set-up of the backup breath rate when set to auto.  
*Note: auto back-up rate maximum is 20bpm. Optional: Inspiratory Time min/max.* |

### Modes and settings: Trilogy 202 to Trilogy EV300

<table>
<thead>
<tr>
<th>Trilogy 202</th>
<th>Trilogy EV300</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>-</td>
<td>Inspiratory Time Min/Max</td>
<td>Once enabled, this setting treats inspiration time as a variable value for patient-initiated, patient-cycled breaths. It is available in S/T, PSV, SIMV-PC, SIMV-VC, and AVAPS-AE modes, under Advanced in the Prescription Settings window.</td>
</tr>
<tr>
<td>AVAPS Rate</td>
<td>AVAPS Speed</td>
<td>This sets the maximum rate of change in pressure between the min and max values while AVAPS is seeking a volume target.</td>
</tr>
<tr>
<td>-</td>
<td>PC Breath (AVAPS-AE)</td>
<td>Available in AVAPS-AE mode. When PC Breath is on, the set inspiratory time applies to all breaths.</td>
</tr>
<tr>
<td>Sigh</td>
<td>Sigh</td>
<td>In Trilogy EV300, available in A/C-VC mode under Advanced in the Prescription window. Sigh volume can be set between 1.5 – 2.5 times the set volume and the frequency every 50 – 250 breaths. While in Trilogy, sigh was fixed at 1.5 times the set volume every 100 breaths.</td>
</tr>
<tr>
<td>-</td>
<td>Back-up Ventilation</td>
<td>Available under Advanced in the Prescription window. When turned on an Apnea interval needs to be set in the alarm settings tab. Within the apnea interval; if no breaths are triggered by the patient, the vent delivers breaths at the set pressure of volume based on the Backup Rate and Backup Insp Time.</td>
</tr>
</tbody>
</table>

Onscreen help

Entering a new prescription or placing a new circuit on the ventilator is simple thanks to the addition of onscreen help.

Simply tap the help icon 🤔 for more information regarding that prescription setting or alarm situation.
Simple
Onscreen battery indicator

During ventilation you can check the battery status.

Tap the battery icons in the toolbar to see the status of each battery.

Adaptable
Tubing compliance compensation

Trilogy EV300 excludes any losses in tidal volume due to the circuit.

Trilogy EV300 includes a default calibration providing automatic tubing compensation for the recommended circuits in the accessory guide.
Adaptable

Circuit calibration

Volume losses in circuit tubing can be calculated and programmed into the Trilogy EV300 using the calibration method.
Adaptable

**Ti min/max**

Available in S/T, PSV, SIMV-PC, SIMV-VC, and AVAPS-AE modes

Access under **Advanced**

Applicable to spontaneous breaths only

Control / mandatory breaths retain set **Insp. Time**
Adaptable

Flow trigger

Flow trigger can be set to 0.5 L/min to offer increased sensitivity for your weakest patients.
Adaptable Rise Time

Rise Time is now even faster than Trilogy, and can be set to 0 to adapt to the needs of your patients.

Note: You can tap on the Help icon whenever it is visible and a screen will appear for information concerning that section.
Adaptable

**AVAPS**
Available in A/C-PC, S/T, and PSV modes

**AVAPS Speed**
- Replaced AVAPS Rate (of change) on Trilogy

**AVAPS Startup**
- First minute not limited by Speed setting
- Next session starts with the previous sessions final inspiratory pressure
Adaptable

AVAPS
Available in A/C-PC, S/T, and PSV modes

Algorithm resets to pressure midpoint when:
• AVAPS restart icon is tapped
• Changing to another pre-set prescription, then changing back

Algorithm does not reset to pressure midpoint when:
• Changing the target tidal volume
• Changing the insp. pressure ranges
Adaptable
AVAPS-AE additional flexibility

PC Breath – On/Off
Adaptable
AVAPS-AE additional flexibility

PS Min/Max can go to 0

Please note that PS Min/Max will change to PC Min/Max when PC Breath is set to On.
Adaptable
AVAPS-AE additional flexibility

AVAPS Automatic algorithm restart

- AVAPS restarts at pressure midpoint
- EPAP returns to EPAPmin for 100 breaths
- AutoBUR (if enabled) restarts
**Adaptable Dynamic parameters**

- **Dyn C**
  - Static Compliance of respiratory system (lungs + chest wall), measured dynamically. Ratio between the change in volume to the change in pressure.
  - Value: 64 mL/cmH2O

- **Dyn R**
  - Airway Resistance
  - Estimate of the change in pressure divided by the airflow through the airways.
  - Value: 14 cmH2O/L/s

- **Dyn Pplat**
  - Plateau pressure is the maximum pressure applied to small airways and alveoli during positive-pressure mechanical ventilation.
  - Value: 10 cmH2O

- **AutoPEEP**
  - Estimate of the pressure (above PEEP) that exists in the patient airway at the end of exhalation.
  - Value: 0 cmH2O
