

PHILIPS

Diamond Select
Advance

Sustainable Planet

Philips strives to improve people's lives and make the world healthier and more sustainable through innovation. The Diamond Select program offers refurbished systems that allow to continue to provide high quality care for a larger population.

Our Diamond Select refurbished systems coming from our facilities around the globe are recognized within the Philips' green product line, since the systems contain between 30%-100% in weight of recycled/refurbished components. Thereby we reduce the emission of CO₂. By focusing on re-use of systems and components in a responsible way we can decrease the amount of energy

and raw materials consumed and still meet our high standards.

At Philips Refurbished Systems we are committed to make efficient use of resources across the entire life-cycle which contributes to the planet's wellbeing. Extending a system's useful lifetime or its components just makes sense.
