

# Confidence up close

## Philips Respironics noninvasive patient circuit with expiratory port filter

During pandemics, clinicians must provide the best individual patient care while protecting themselves and others. During NIV, exhaled gas exits the patient circuit through the exhalation port. Filtration of this port may reduce the risks of cross-contamination for surrounding family and caregivers. For this reason, Philips has released an NIV circuit with an expiratory filter. Clinicians can add or remove the single-use filter at any time without affecting their patient's work of breathing or Respironics ventilator performance. This circuit is cost-effective and simple to use.

### Key advantages

- Filter protects clinicians from exhalation port particle dispersion
- One package provides a complete solution
- Optional filter is easy to add and remove from circuit

# PHILIPS

# Philips Respironics NIV circuit with expiratory port filter

The expiratory filter provides greater than 99.99% bacterial and viral efficiency to protect clinicians.<sup>1</sup> Filtration offers reassurance and peace of mind to any clinician with concerns about the safety and appropriateness of using NIV during a pandemic.
