

Philips Hue & Apple HomeKit

Philips Hue
Philips Lighting
24 November 2014

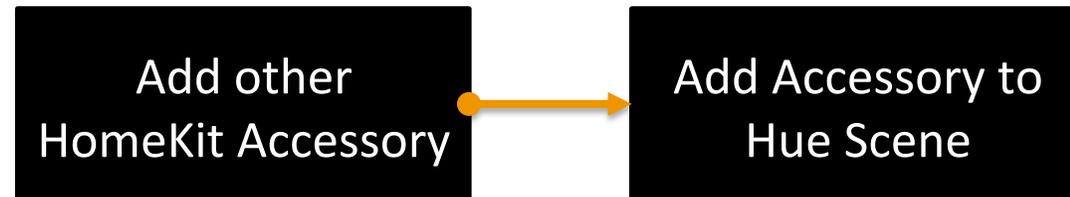

Process

- These guidelines will help you to setup your Philips Hue system to operate with HomeKit.
- The guidelines help to get the best experience from Philips Hue and HomeKit

Process

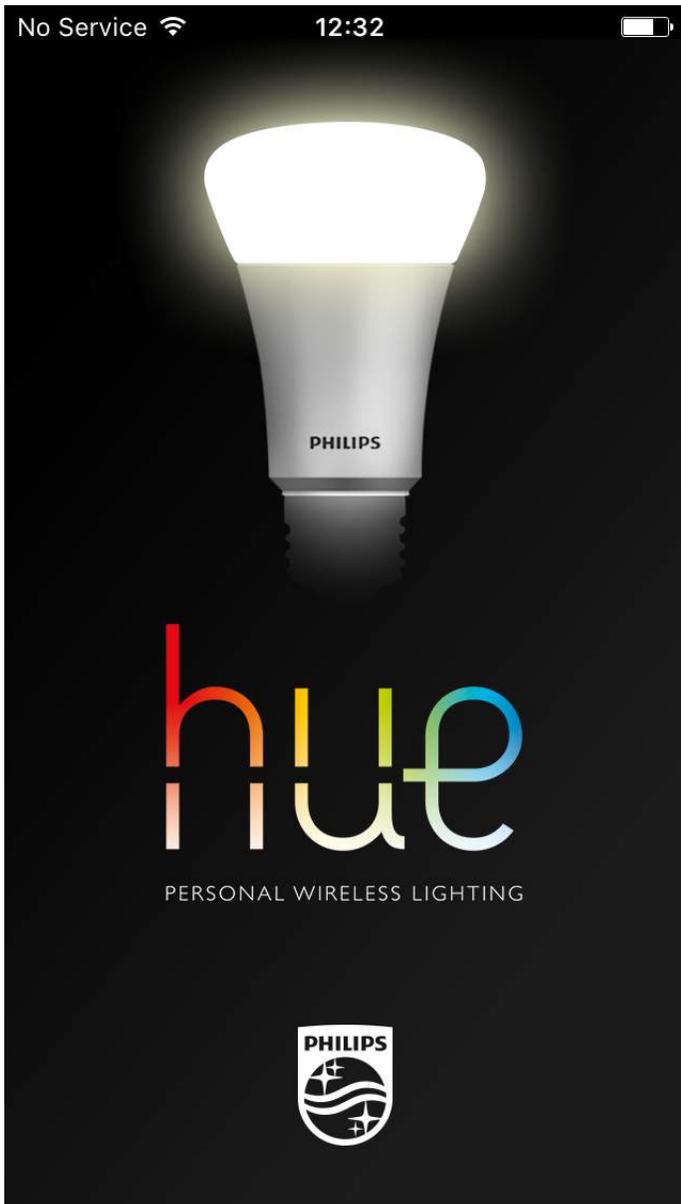

With other HomeKit devices:

Getting started

- Power your new Hue Bridge and connect it to the network
- If you have an existing system, please keep old Hue Bridge powered on and connected to the same network as well
- Wait until the three small LEDs (power, network, internet) on your new Hue Bridge are steady on

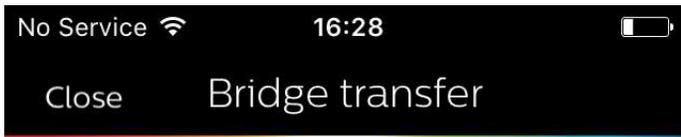

Open the Philips Hue app

If you don't have an existing Hue system, you can skip the 'Migrate to new bridge' section and immediately proceed to 'Pair bridge to HomeKit'

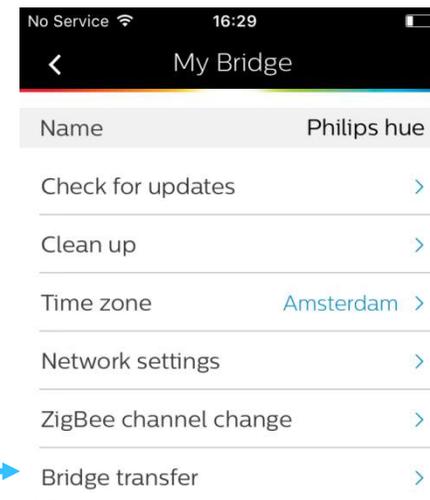

Migrate to new bridge

Added 4 minutes ago

We detected the new Bridge. Tap "Transfer settings" below to transfer your lights, devices, scenes, and alarms & timers to the new Bridge.

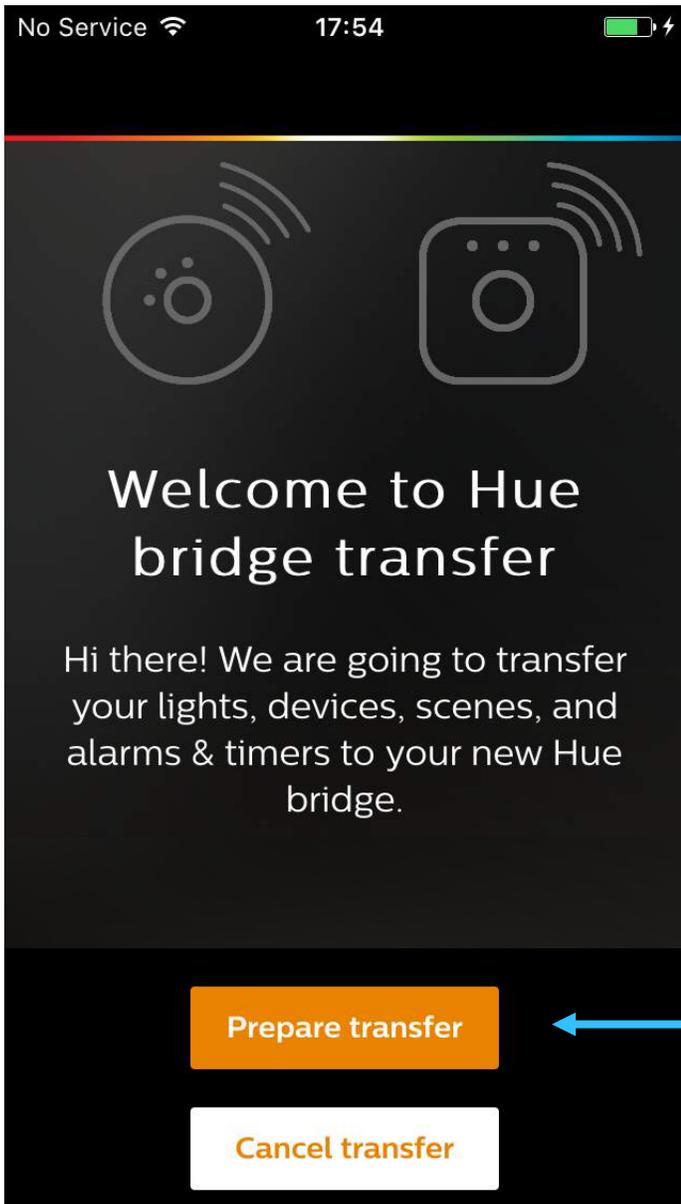

After starting the Hue app, you will be requested to transfer your bridge settings

If you don't see the notification, please navigate to "Settings → My Bridge → Bridge Transfer" →

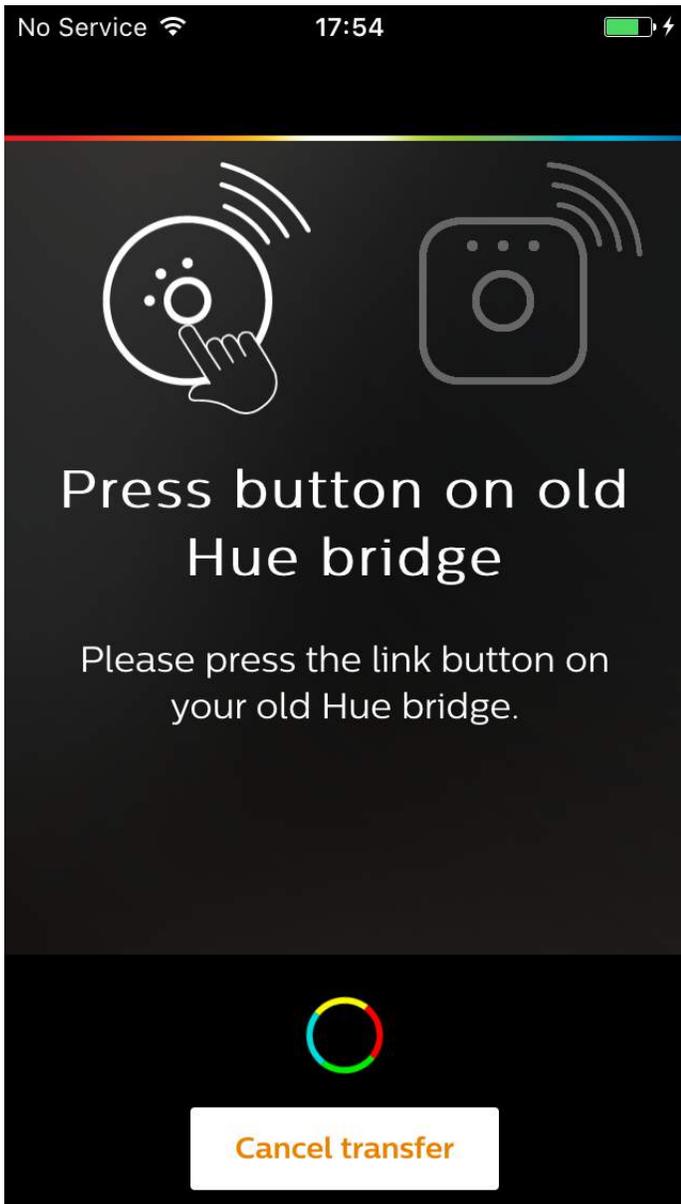

Tap 'Transfer settings'

We will help you to automatically transfer your settings to your new Hue Bridge

This way you can seamlessly add HomeKit functionality to your existing Hue system setup

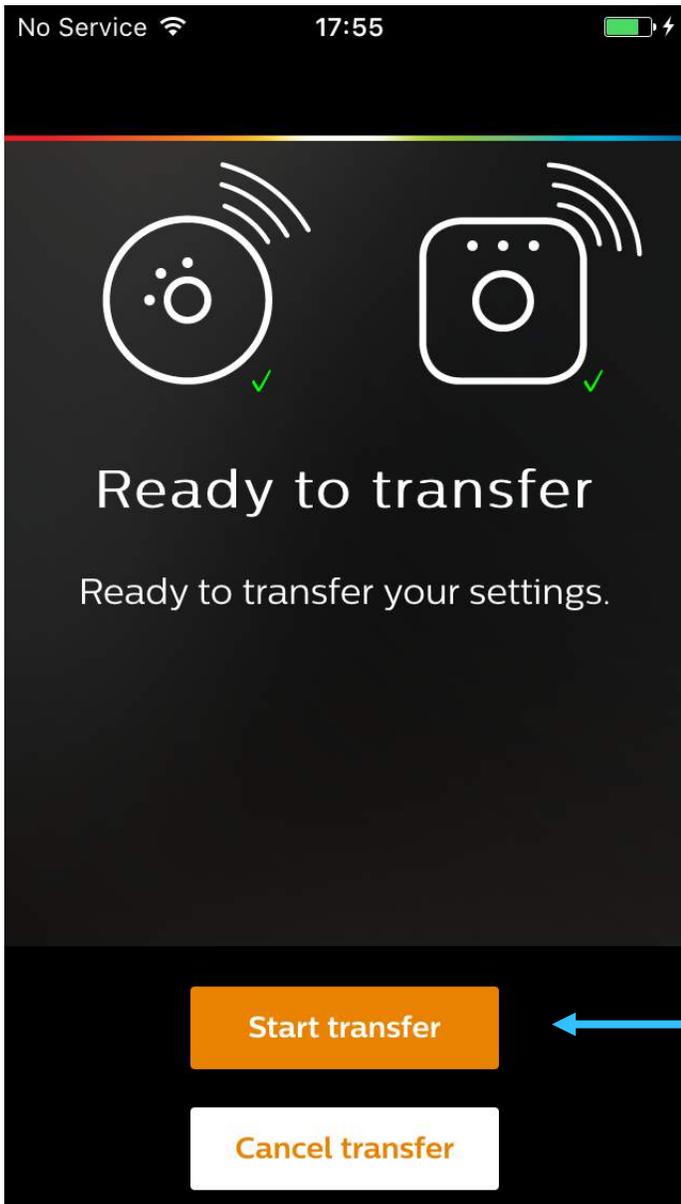

Tap 'Prepare Transfer'

First, we will prepare both your Hue Bridges for the transfer

During this process you will be asked to press the button on both your old and new Hue Bridge

If one of your Hue Bridges is not up to date, it will be updated automatically which can take several minutes

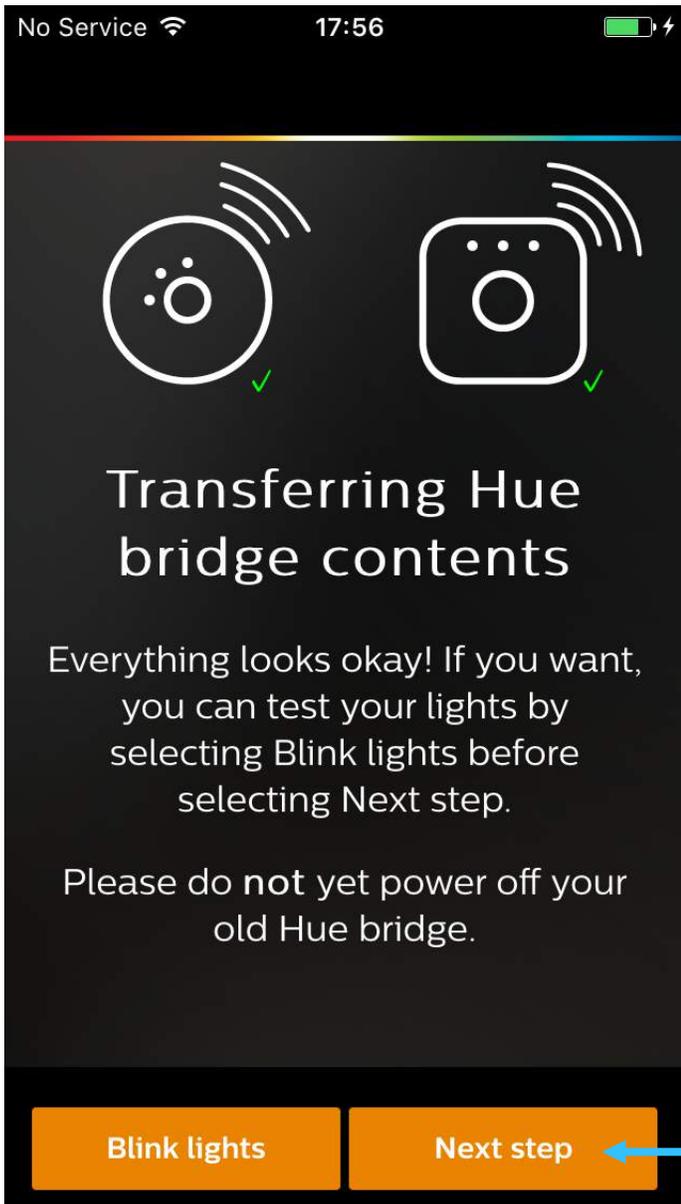

Once everything is prepared, you can start the actual transfer

From this point onward, your new Hue Bridge will irreversibly replace your old Hue Bridge in the system

The transfer process will take about one minute

• Tap 'Start Transfer'

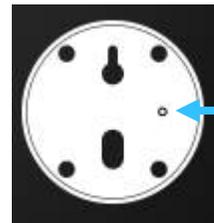

After the transfer has been completed, there's an option to test your new Hue bridge by blinking your lights before going on to the next step

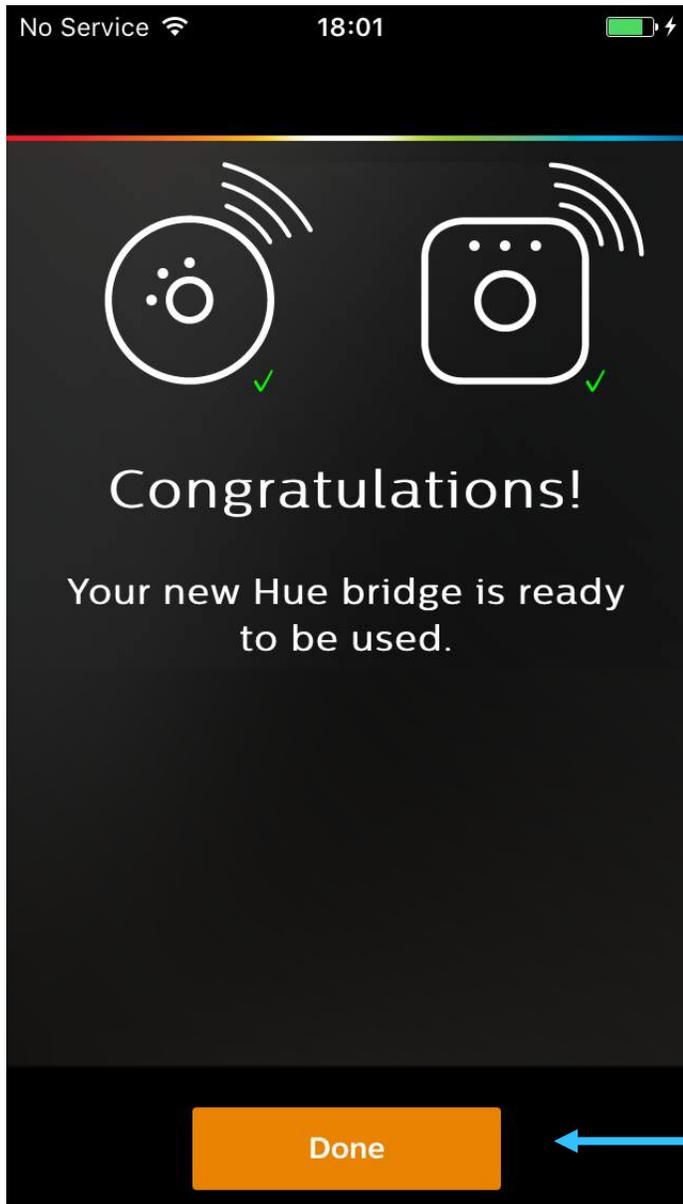

● Tap 'Next step'

To make sure your old Hue bridge won't interfere with your new one, the last step is to reset your old Hue bridge

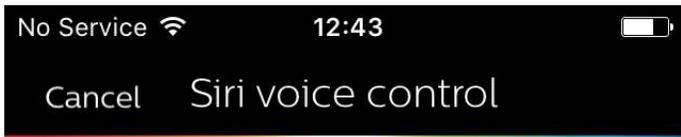

Press pinhole on old bridge for three seconds

That's all!

Tap 'Done'

Pair bridge to HomeKit

Bridge. Siri voice control enables you to:

 Select and turn on your favorite scenes by saying "[scene name]".

 Control your lights by saying e.g. "Turn lights off" or "Turn [light name] on". For more information go to www.meethue.com/siri.

 Share your HomeKit configuration with others, enabling them to control their own lights via your system.

Pair Bridge

← Tap 'Pair Bridge'

If you've paired to the bridge, you will be notified to setup Siri Voice Control

← Aim the camera at the bottom of your bridge

← The pairing code will automatically be recognized

Adding Accessory

← The Bridge is added as Accessory

Make sure it is connected to power.

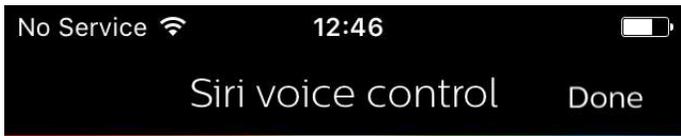

[← Back](#)

Add a Device

Enter the 8-digit accessory setup code found in the device packaging or on the device.

In case the pairing via the camera does not work, you can manually pair the bridge by entering the code on the bottom of the bridge

1	2 ABC	3 DEF
4 GHI	5 JKL	6 MNO
7 PQRS	8 TUV	9 WXYZ
	0	⌫

You are now successfully paired to HomeKit.

Please enable Siri (iOS Settings > General > Siri) and iCloud Keychain (iOS Settings > iCloud). For more information see www.meethue.com/support.

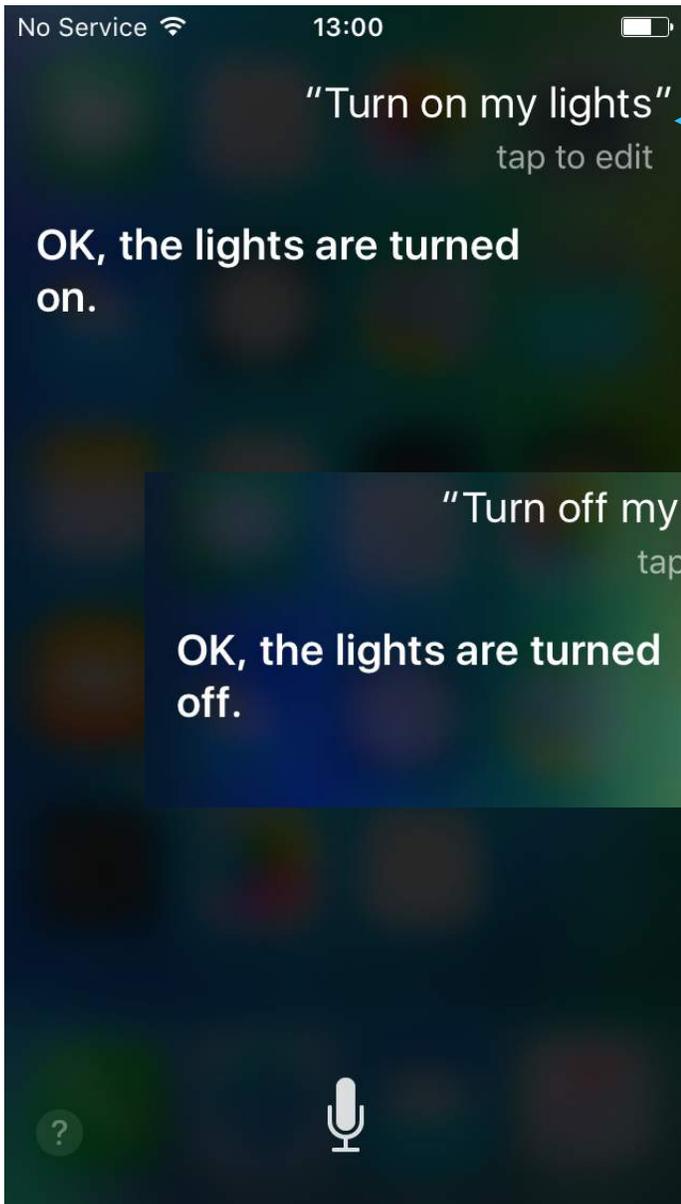

To test if it worked, press and hold the home button to activate Siri and say: "Siri, turn on my lights".

You can now recall your favorite scenes via Siri by exporting them via Settings > Siri Voice Control.

You receive confirmation that your bridge is successfully paired

You receive information on how to test if Siri is set up correctly

Test whether Siri Voice control works by turning 'on' your lights

In case your lights are already 'on', you can turn them 'off'

Available Siri Voice Commands

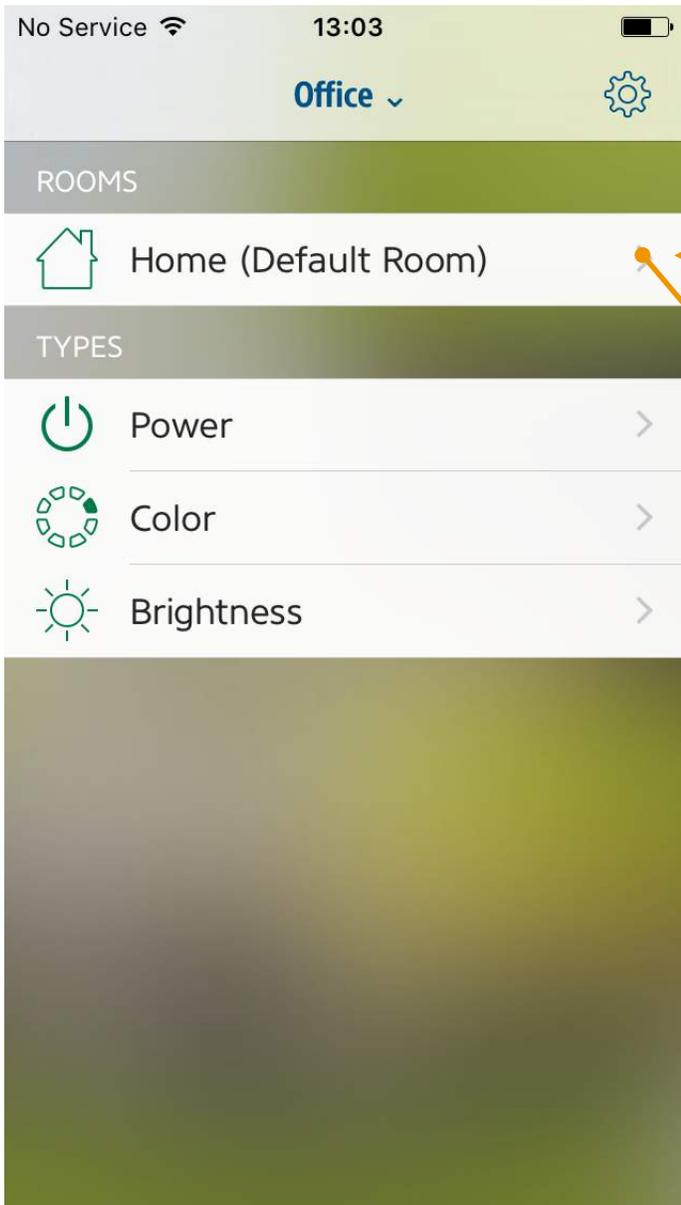

- At this point you can use the following Siri Voice Commands:
 - *Turn on my lights*
 - *Turn off my lights*
 - *Dim my lights to <xx>%*
 - *Dim my lights*

HomeKit organization

HomeKit Organization

- In HomeKit you can organize your smart devices in *Rooms* and *Zones*.
- This enables Voice Commands, such as “Turn on my Living Room” or “Turn off the lights downstairs”

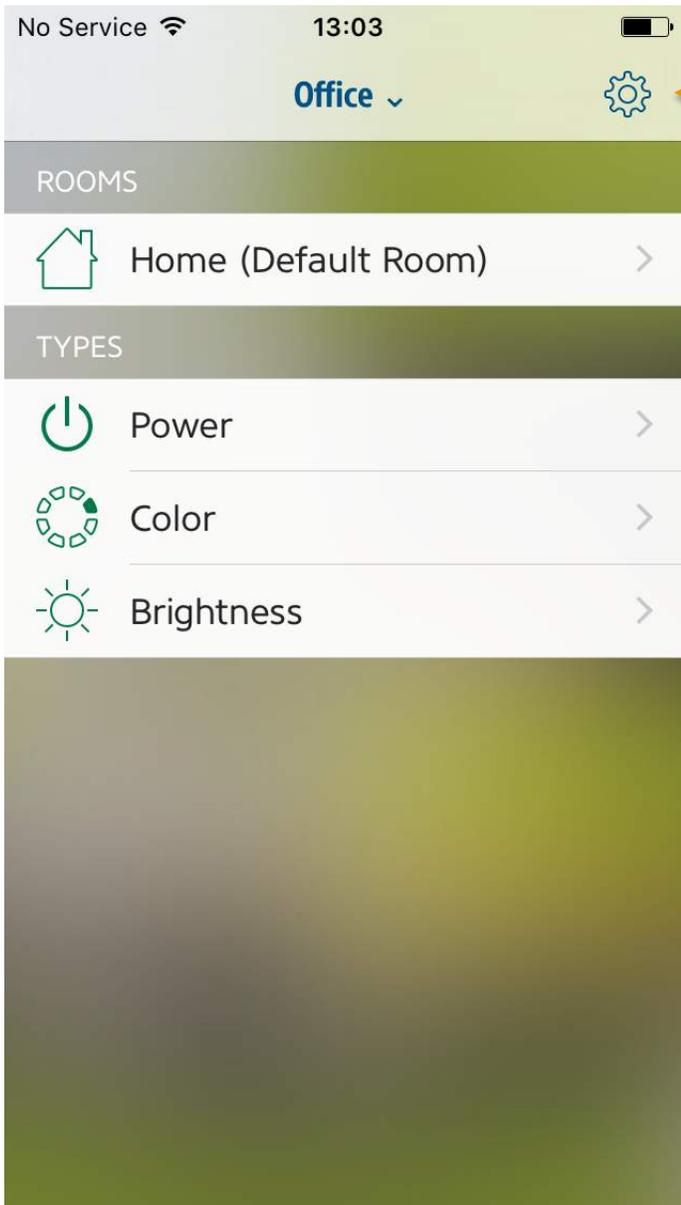

- We use Elgato Eve to organize our Home.
- FAQ contains more recommended apps.

Elgato Eve shows currently 1 Room with all your lights

When you tap the Room, your lights should be listed

← Tap 'Settings' to create more Rooms

Home Name Office >

Appearance >

Rooms >

Types >

Accessories >

Users >

Scenes >

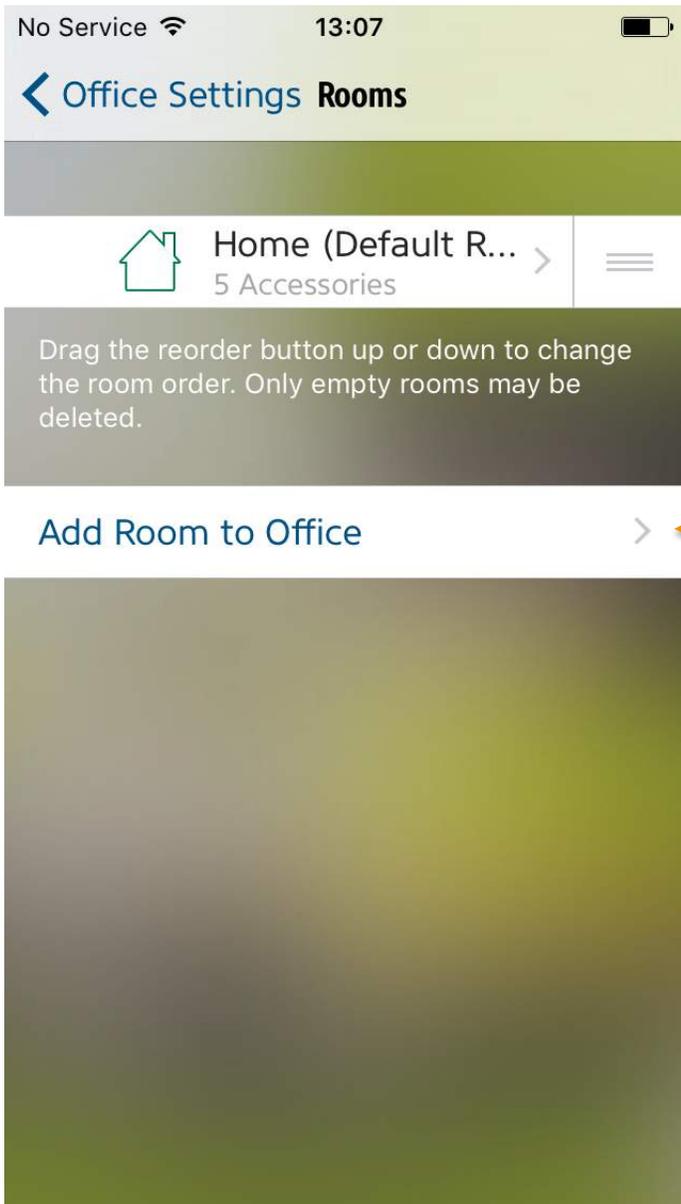

Zones >

Service Groups >

Add Accessory to Office >

Add Accessory to Office >

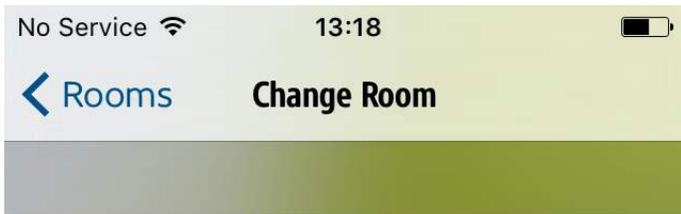

Tap 'Rooms' to create more Rooms

Tap 'Add Room to <Home name>' to create more Rooms

Please note By default your HomeKit Home will be named 'Home' and the text reads:

“Add Room to Home”

← Name your room...

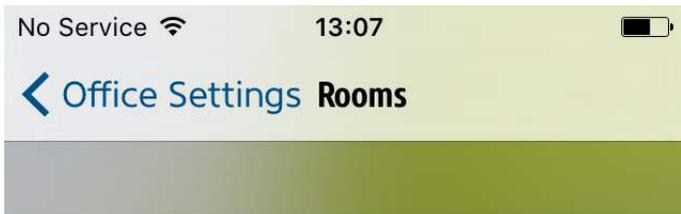

← ...and select an icon for it

The name you provide is used in Siri Voice Commands.

We recommend using simple names (e.g., Living Room, Kitchen, Bedroom)

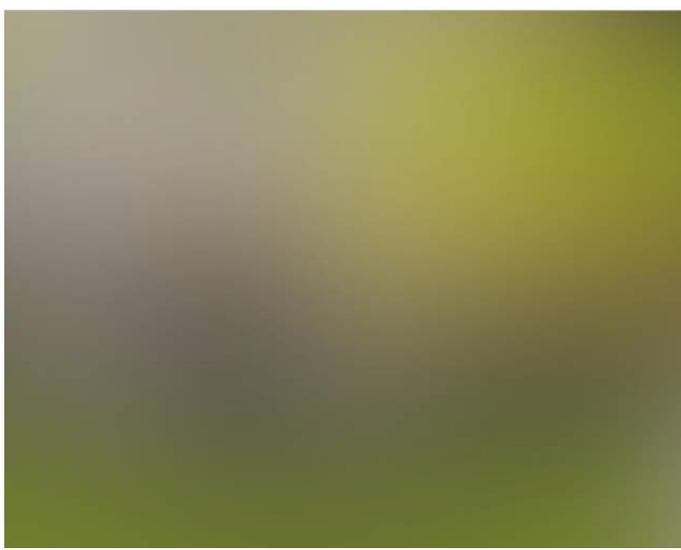

← The room is added to your overview

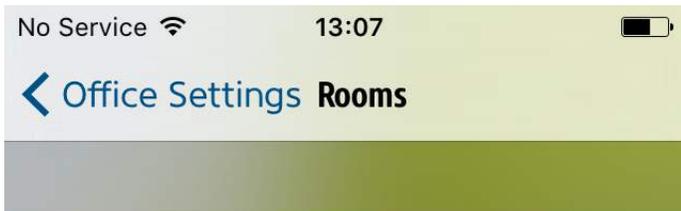

Drag the reorder button up or down to change the room order. Only empty rooms may be deleted.

Add Room to Office >

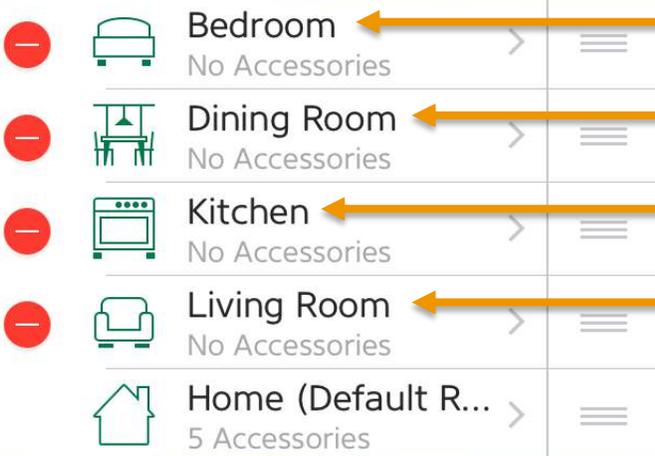

← Tap to add more rooms to your house

Repeat the process for every room that you have Philips Hue lights

We've added four rooms, each with one light.

“Bedroom” is now available as Siri Voice Command

“Dining Room” is now available as Siri Voice Command

“Kitchen” is now available as Siri Voice Command

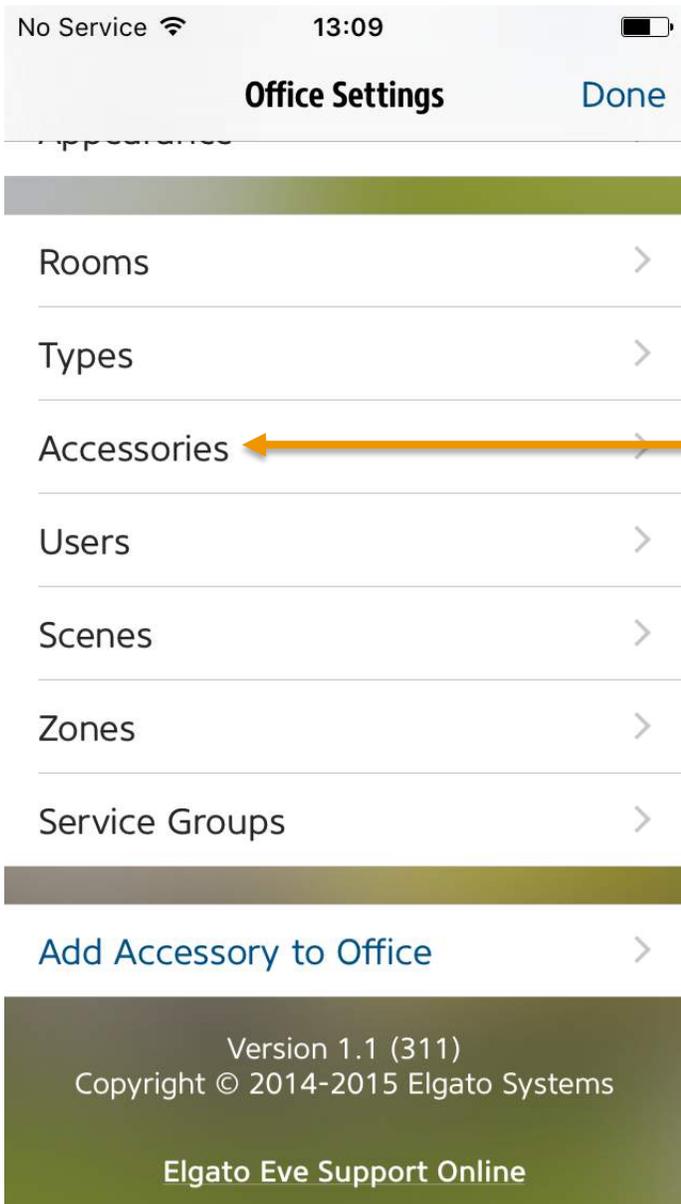

“Living Room” is now available as Siri Voice Command

Drag the reorder button up or down to change the room order. Only empty rooms may be deleted.

Add Room to Office >

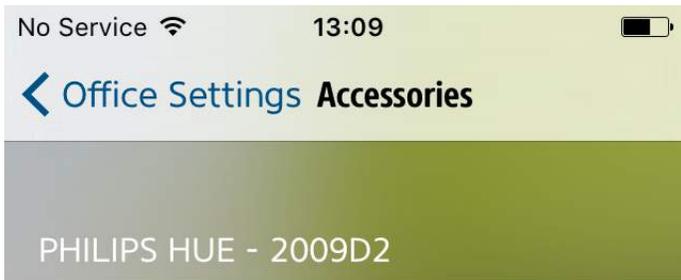

Navigate back to the 'Settings' menu

Next we'll assign the lights to the rooms we created

Tap 'Accessories'

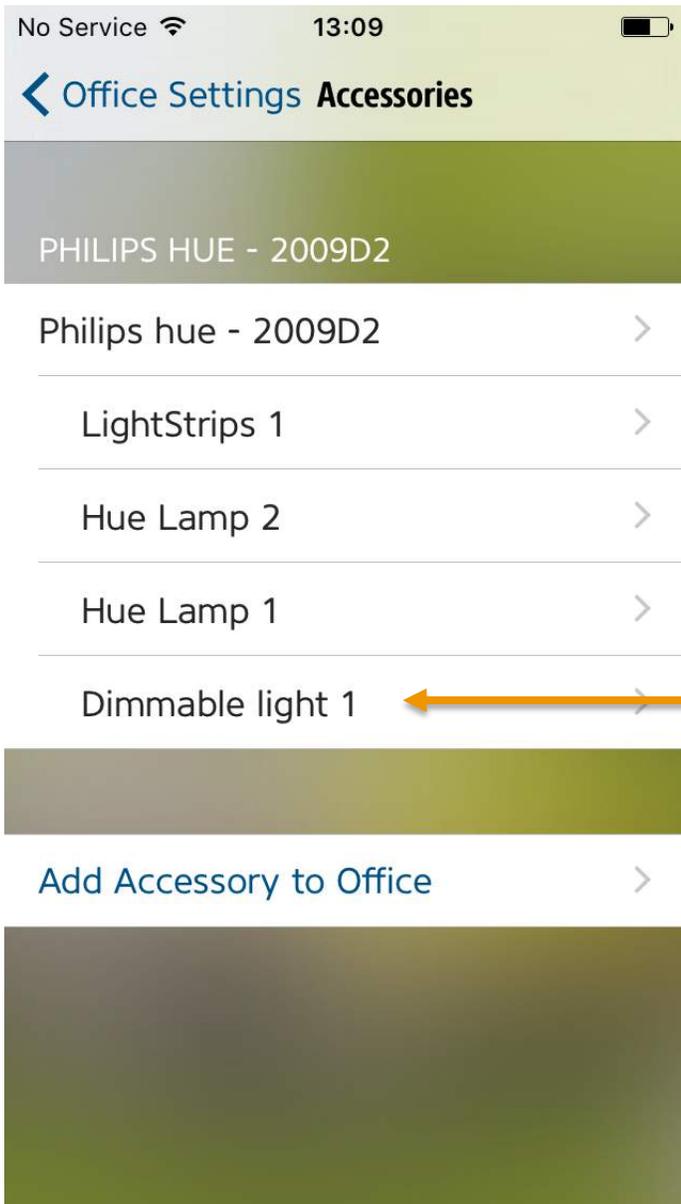

This menu shows all Accessories in your system

- Philips hue - 2009D2 < >
- LightStrips 1 < >
- Hue Lamp 2 < >
- Hue Lamp 1 < >
- Dimmable light 1 < >

We have a Philips Hue bridge...

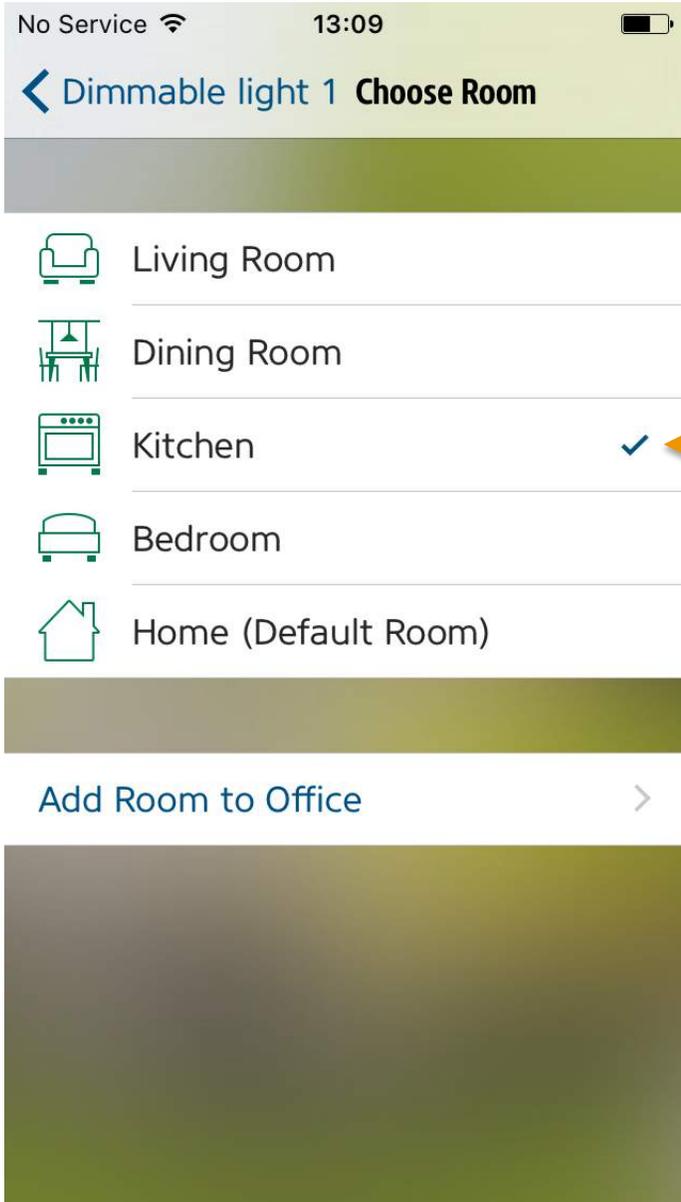

...with four lights

Add Accessory to Office >

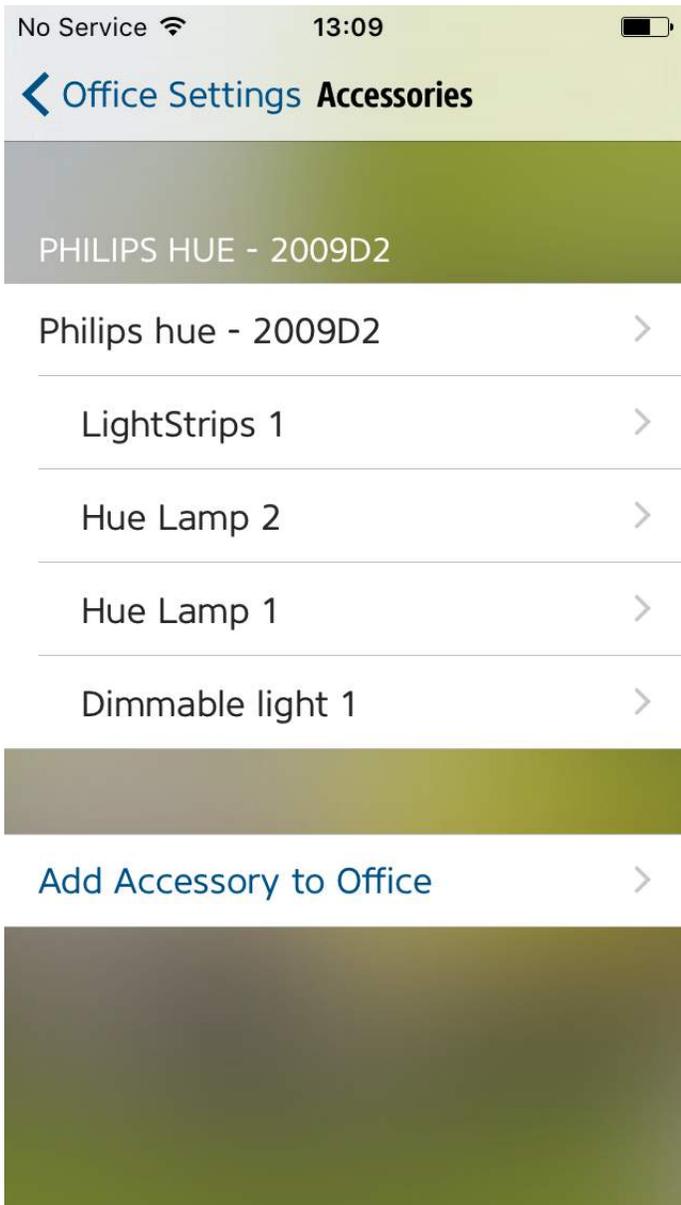

This menu shows all Accessories in your system

Tap a light source

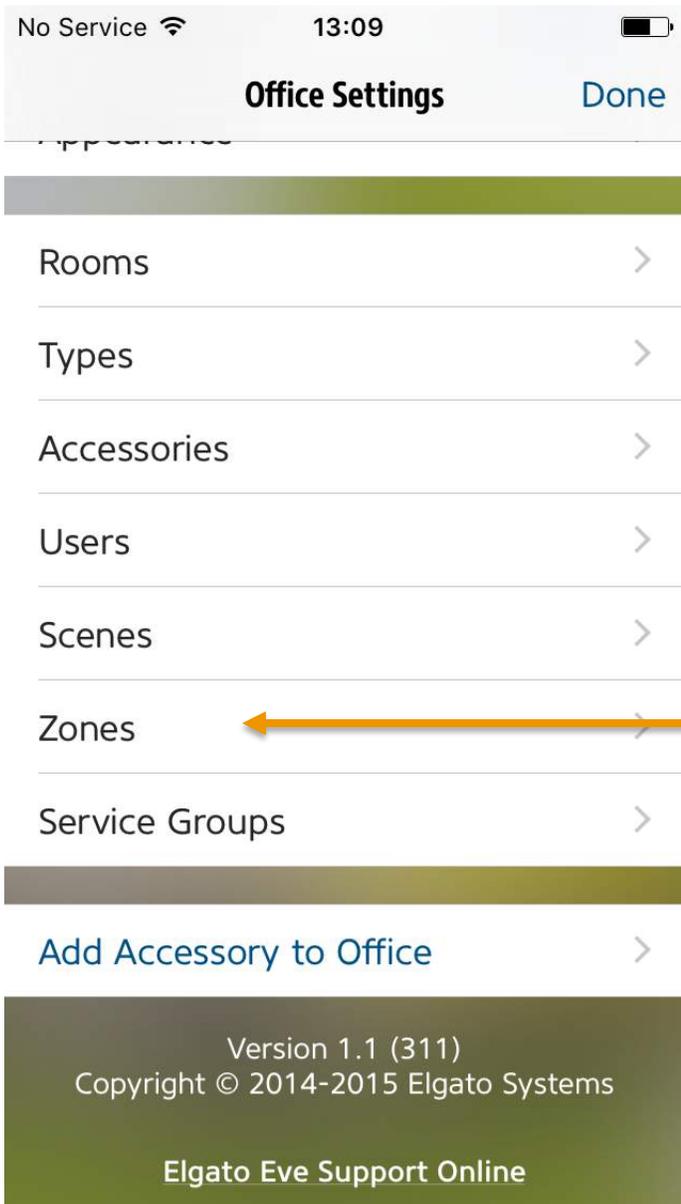

This menu shows all Accessories in your system

Assign the light to a room by tapping the room

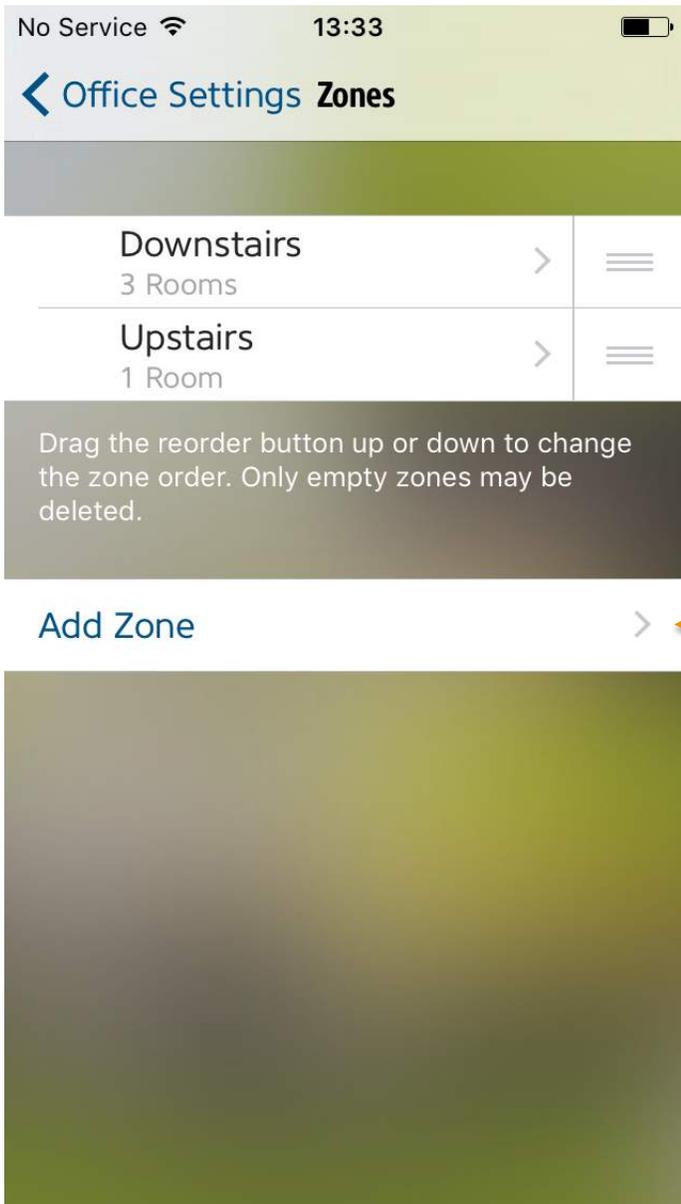

Repeat this to assign all your lights in rooms

Navigate back to the 'Settings' menu

Next we'll assign *rooms* to *zones*.
Zones are a group of *rooms* that can be controlled together.

Tap 'Zones'

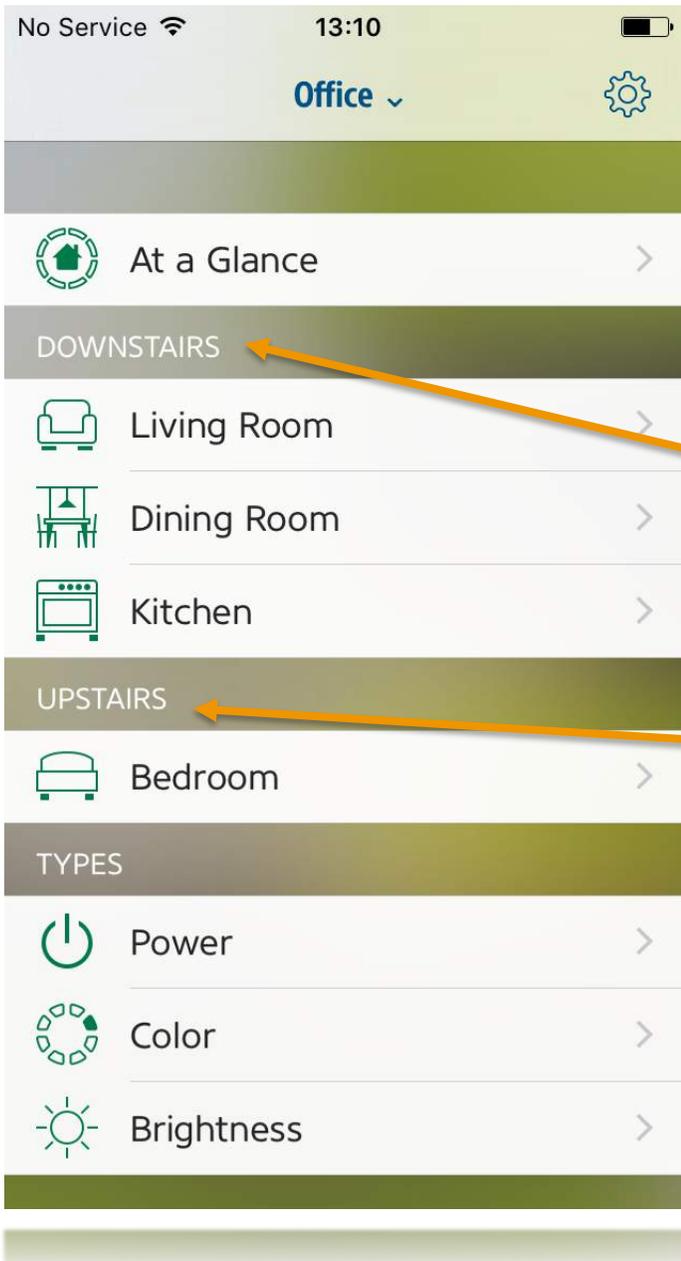

Tap 'Add Zone' to create a new *Zone*

-  Bedroom
-  Dining Room
-  Kitchen
-  Living Room
-  Home (Default Room)

Zones are a group of Rooms. For example: downstairs and upstairs

← Assign one or more *rooms* to a *zone*

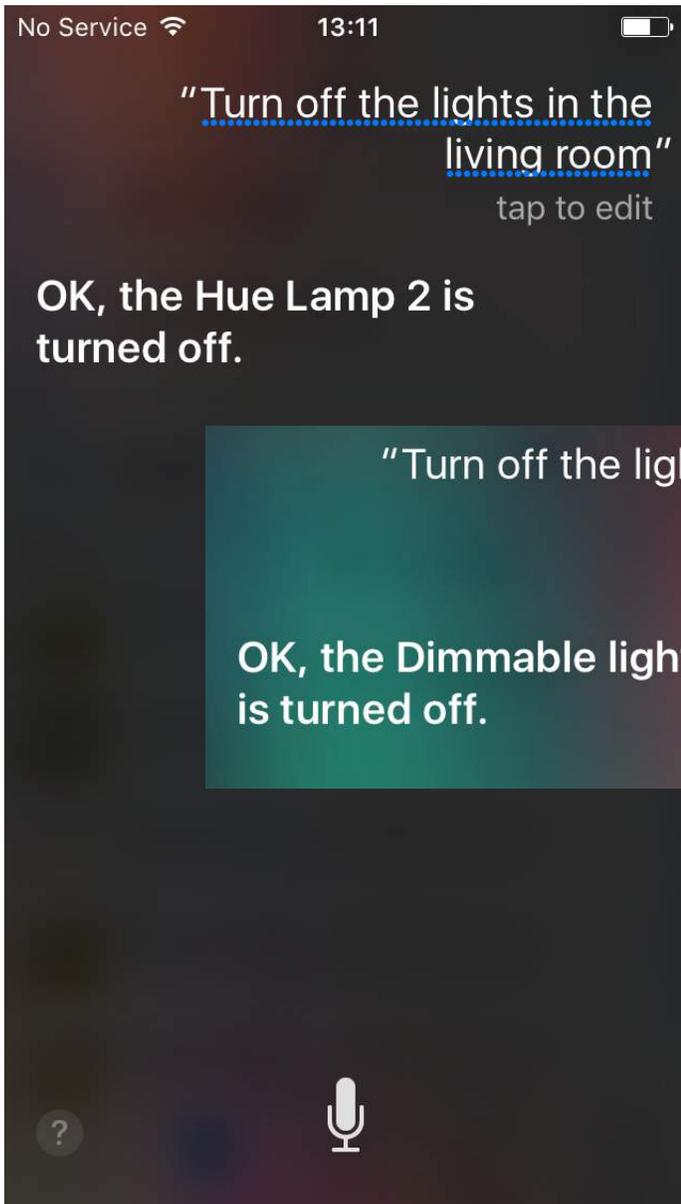

Navigate back to the main menu.

This should now list your *zones* and all *rooms* in it.

Zone: 'Downstairs'
Contains 3 rooms (Living Room, Dining Room, Kitchen)

Zone: 'Upstairs'
Contains 1 room (Bedroom)

You can now recall rooms and zones via Siri Voice Commands

Available Siri Voice Commands

- At this point you can use the following Siri Voice Commands:
 - *Turn on my lights in <Room>/<Zone> (e.g., “Turn on my lights in the Living Room”)*
 - *Turn off my lights in <Room>/<Zone>*
 - *Dim my lights in <Room>/<Zone> to <xx>% (e.g., “Dim my lights in the Bedroom to 20%)*
 - *Dim my lights in <Room>/<Zone> (e.g., “Dim my lights Downstairs)*

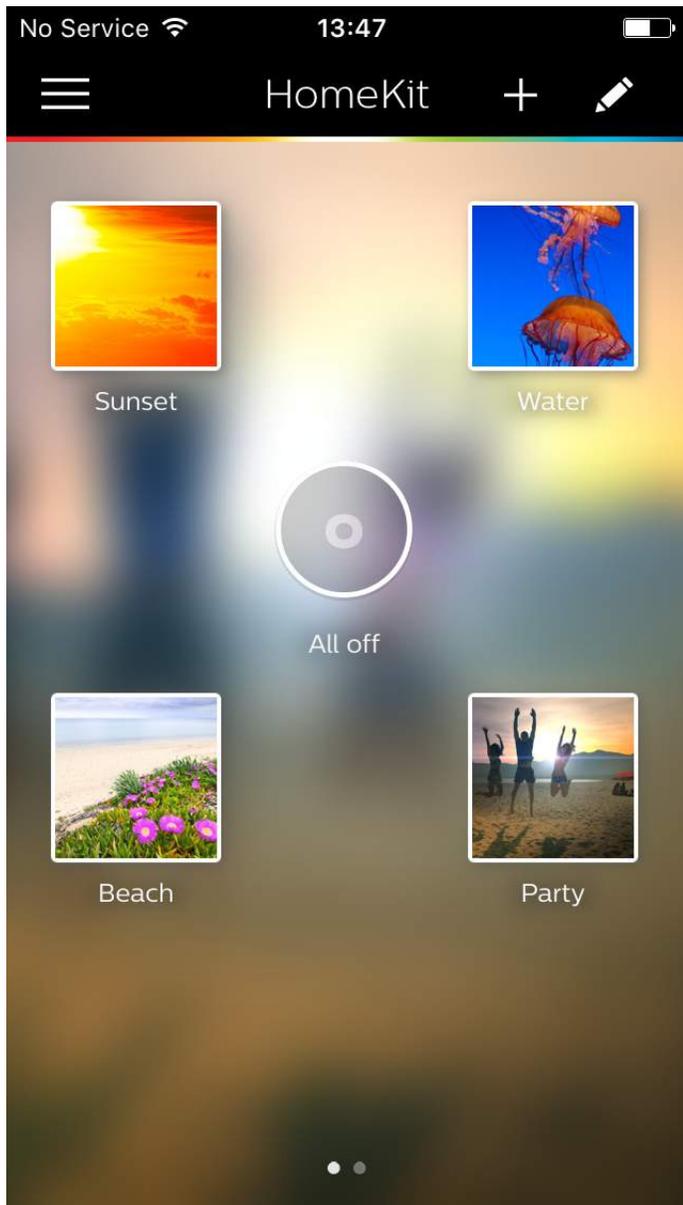

HomeKit Organization

- You have now organized your Philips Hue system in rooms and zones.
- Any other HomeKit compatible Accessories can be organized in the same way.

Export from Hue to HomeKit

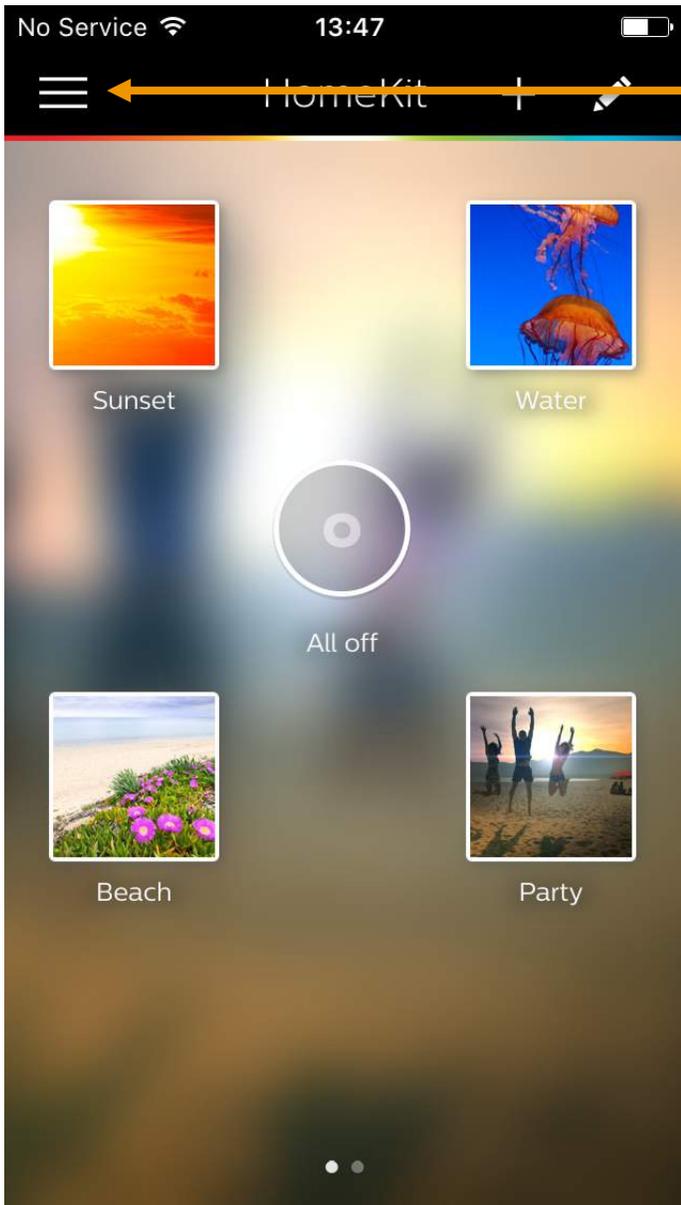

Export Hue to HomeKit

- Philips Hue offers the possibility to export your favorite scenes as Siri Voice Commands.
- Additionally, you can export the names of your lamps to control them via Siri Voice Commands.

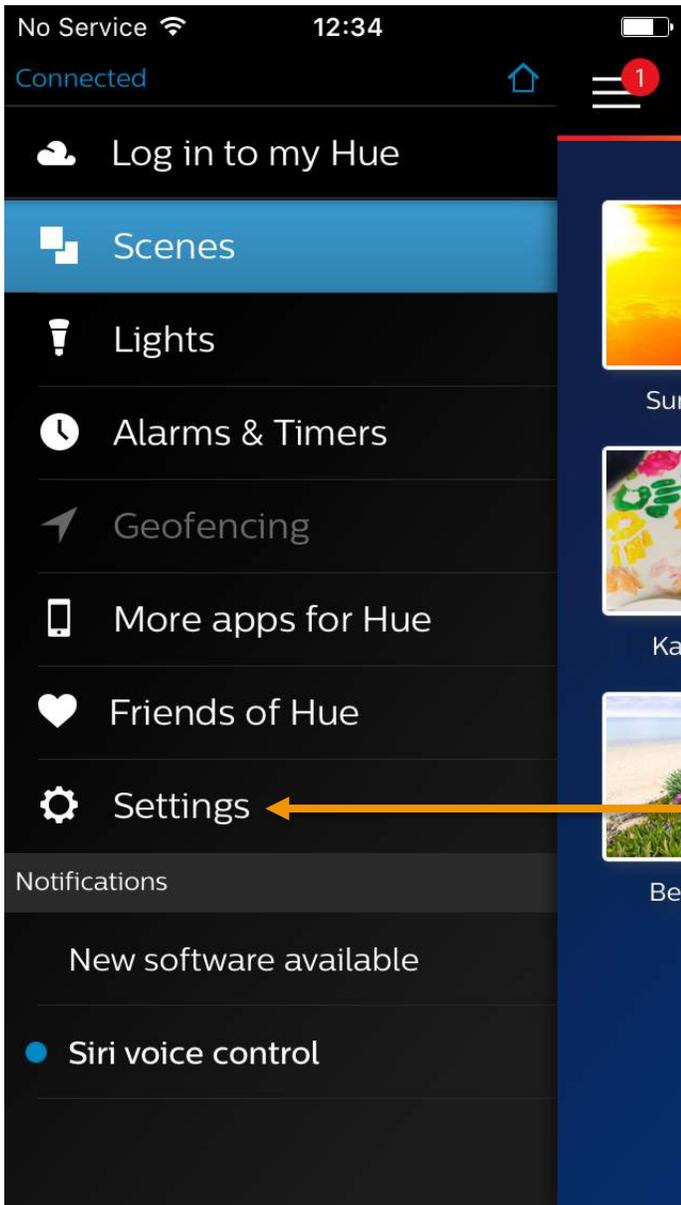

We have four favorite scenes that we want to export to a Siri Voice Command:

- *Sunset*
- *Water*
- *Beach*
- *Party*

Open the menu

Tap 'Settings'

- My Bridge 2009D2 >
- Find Bridge >
- My lights >
- My devices >
- My app >
- Widget & Apple Watch >
- Siri voice control >
- About >
- Intro >

← Tap 'Siri Voice Control'

This menu lists all items that can be made available as Siri Voice Commands. Make sure "Scenes" is selected.

Select the scenes that you want to recall via Siri voice control. Recall the scene by saying "[scene name]". For more information go to www.meethue.com/siri.

←—————● Navigate back to 'Siri voice control'

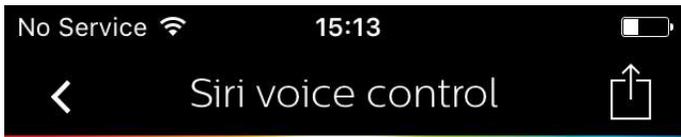

Click 'Lights'

Control your lights by saying e.g. "Turn lights off" or "Turn [light name] on". For more information go to www.meethue.com/siri.

 The exclamation marks indicates lights which are currently out of sync. Tap a light in order to establish sync.

-  Sofa lamp 
-  Reading lamp 
-  Bedside lamp 
-  Cooking lamp 

The updated names are displayed here.
The exclamation mark indicates the Siri Voice Commands need to be updated.
Tap each light to update its name

Scenes **Lights**

Control your lights by saying e.g. "**Turn lights off**" or "**Turn [light name] on**". For more information go to www.meethue.com/siri.

- ! Sofa lamp ✓
- ! Reading lamp ✓
- z Bedside lamp ✓
- ! Cooking lamp ✓

You can now control individual lamps via Siri Voice Commands

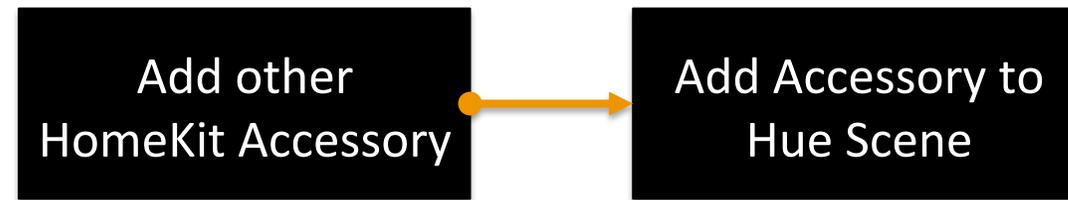

Available Siri Voice Commands

- At this point you can use the following Siri Voice Commands:
 - *Turn on my <lamp name> (e.g., “Turn on my Cooking lamp”)*
 - *Turn off my <lamp name>*
 - *Dim my <lamp name> to <xx>% (e.g., “Dim my bedside lamp to 90%”)*
 - *Dim my <lamp name>*
 - *Set my <lamp name> to <color> (e.g., “Set my Reading lamp to orange”)*

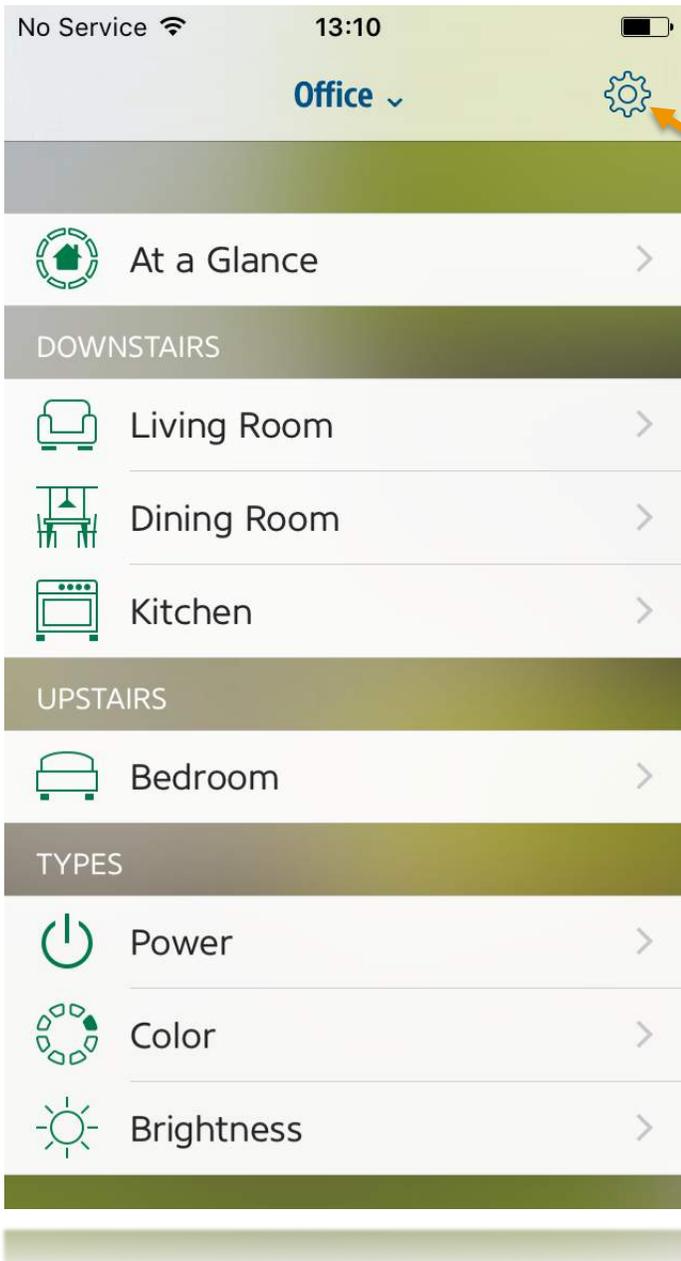

Combine with other
HomeKit Devices

Combine HomeKit Devices

- In case you have other HomeKit devices, you can combine these with Philips Hue lighting.
- We will show how to add another HomeKit Accessory, and
- How to add that Accessory to a Hue Scene

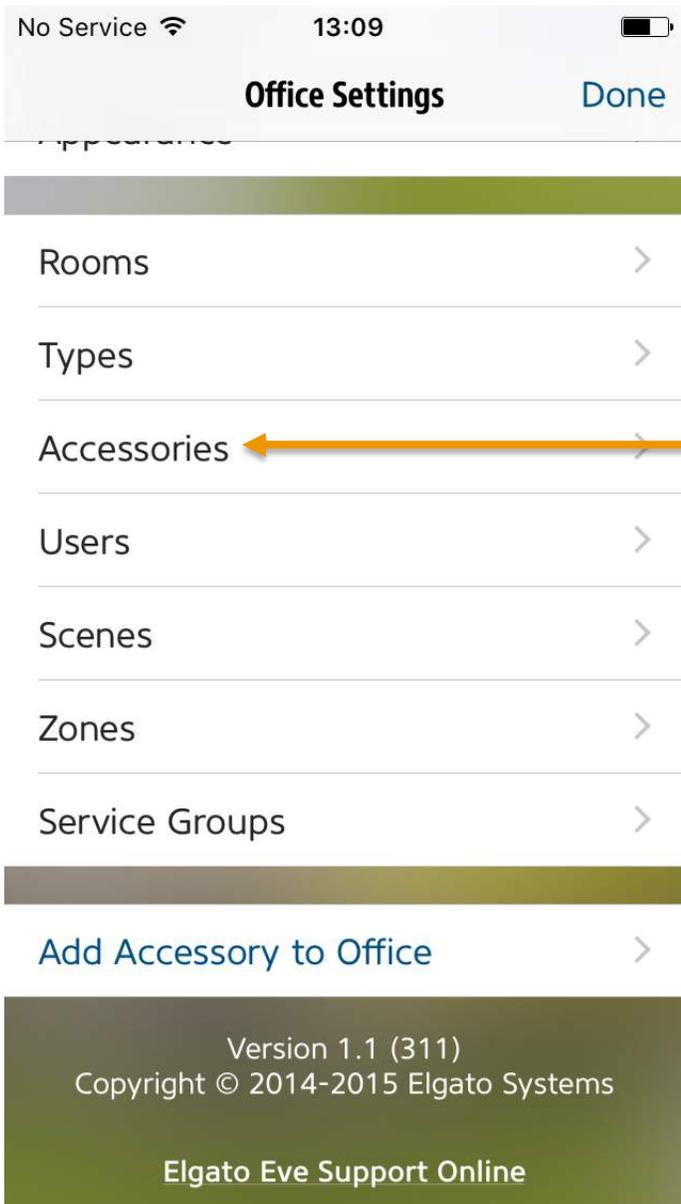

- We use the app Elgato Eve in these examples.

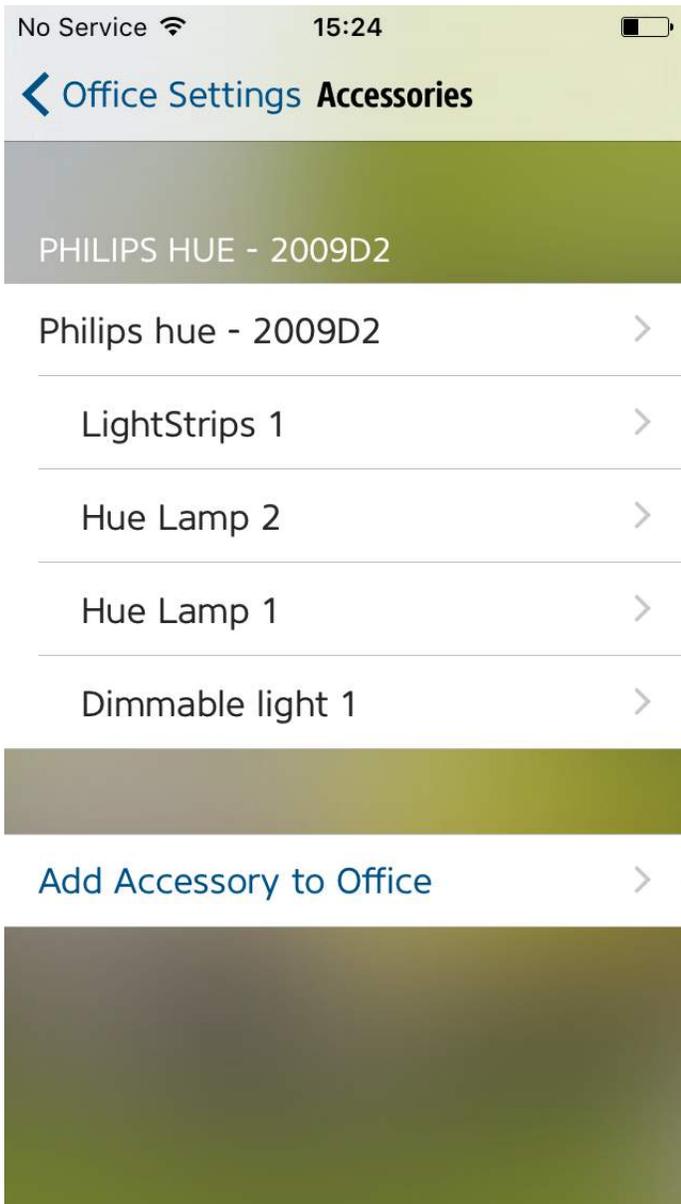

Open Algeto Eve app

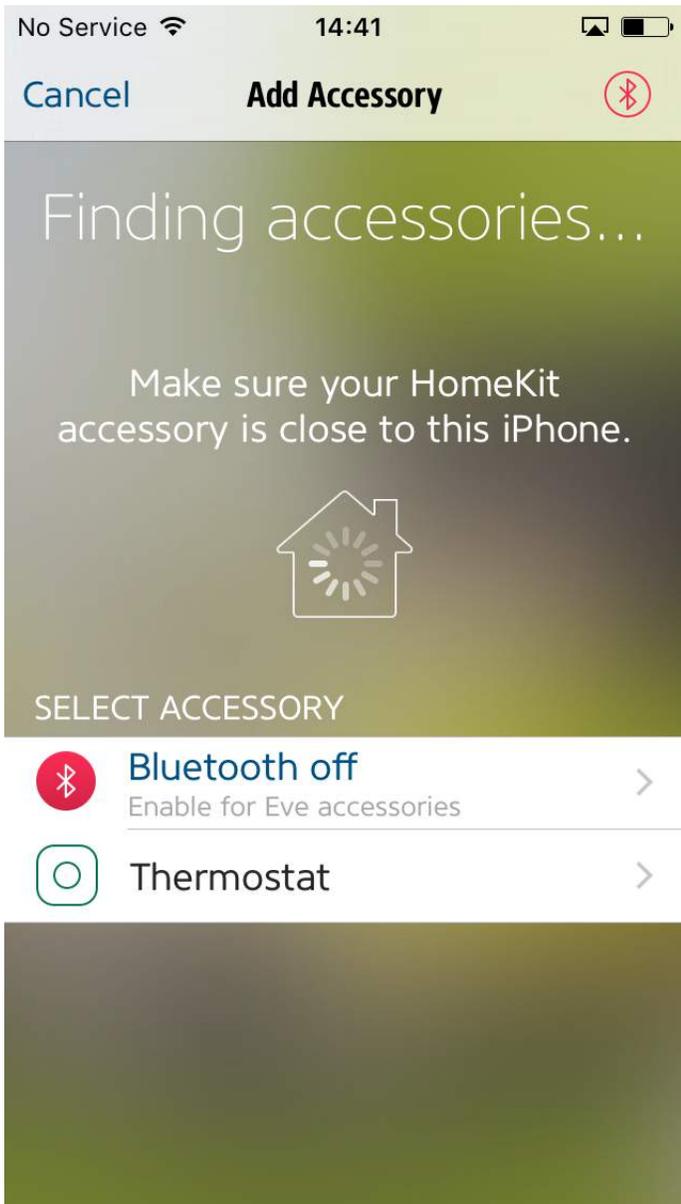

Click 'Settings' to add a new 'Accessory'

Tap 'Accessories'

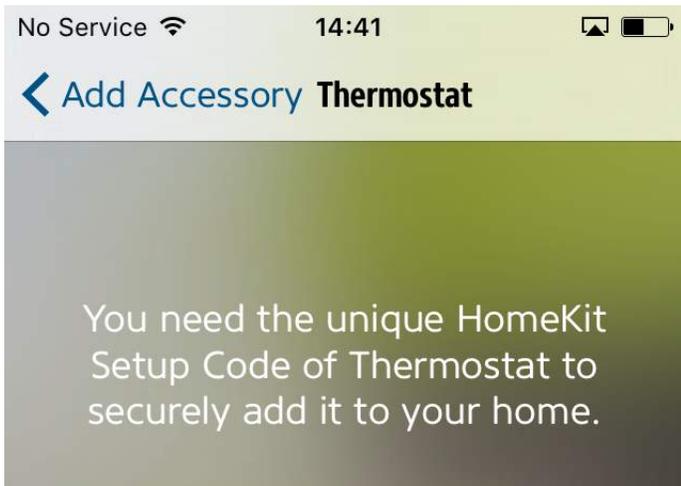

Tap 'Add Accessory...' to search for HomeKit compatible devices

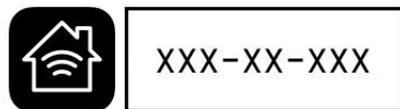

Network is being searched for accessories

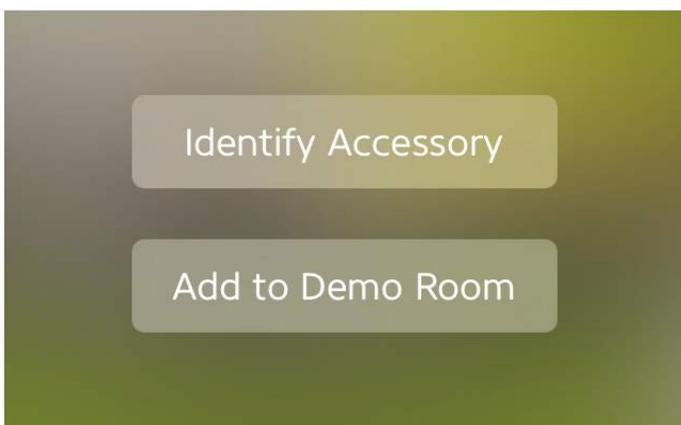

A new 'Accessory' is found. Tap to add.

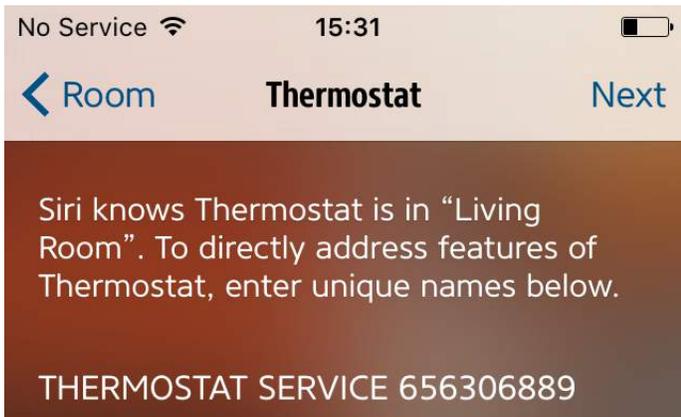

Sample HomeKit Setup Code

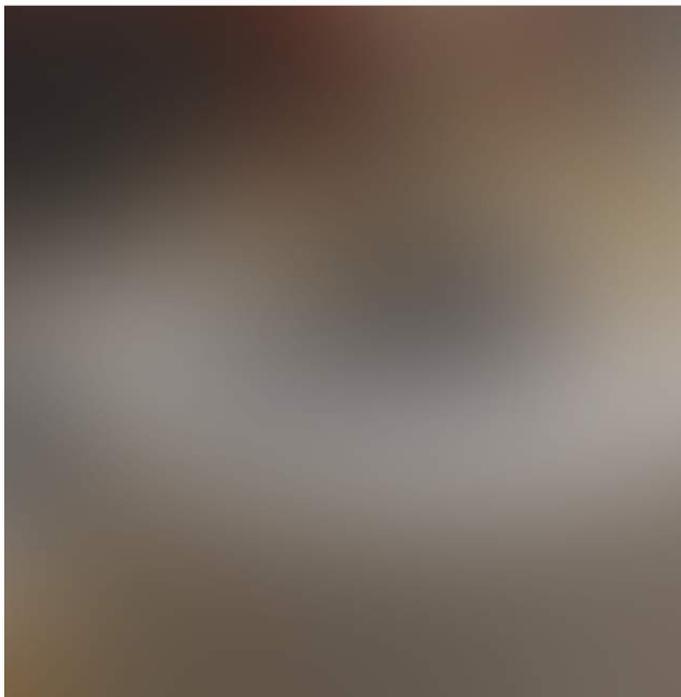

← Pair the new device using the pairing code

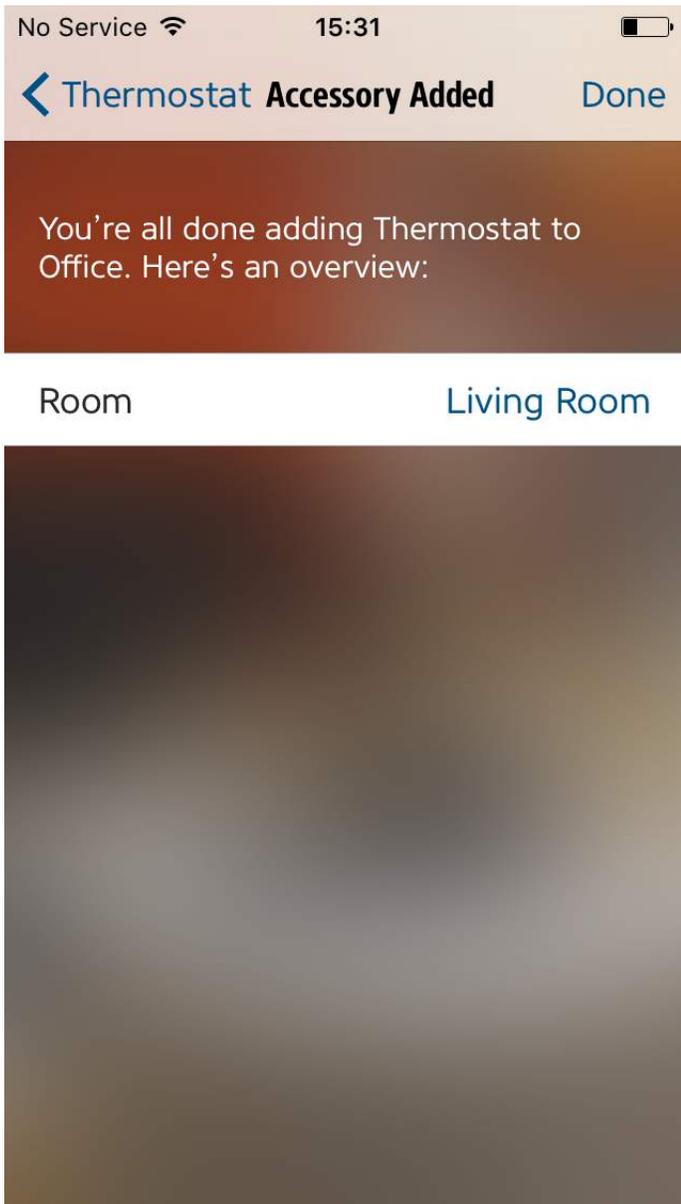

Name My Thermostat >

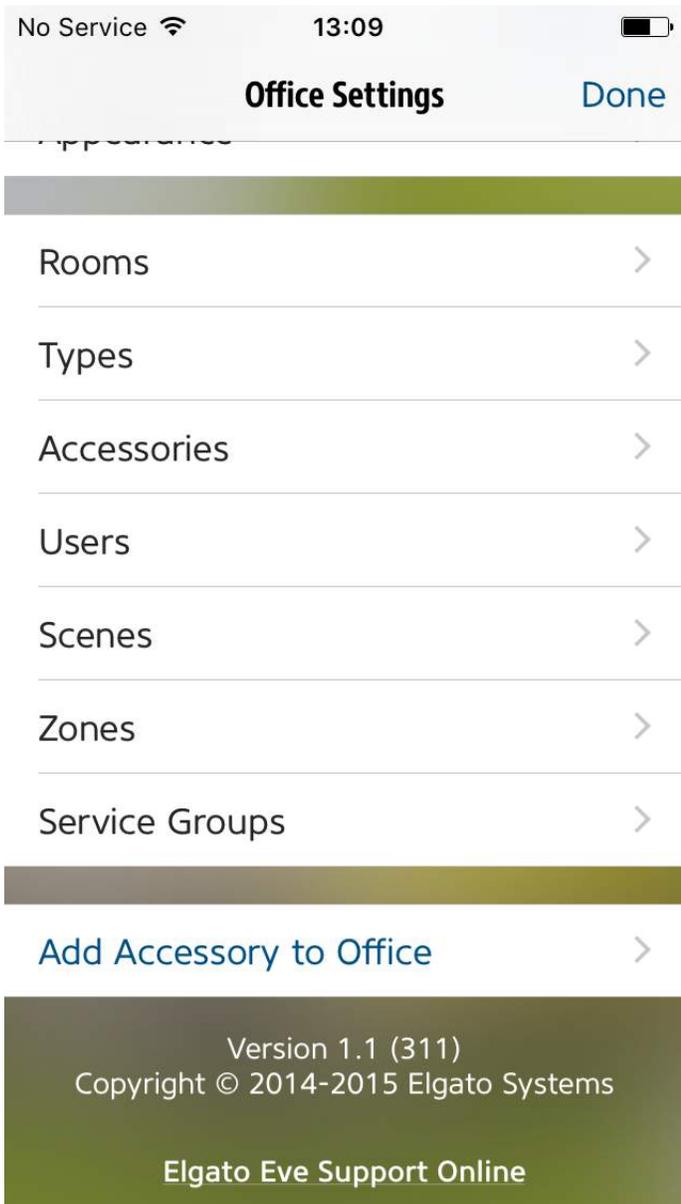

← Rename the device (if desired)

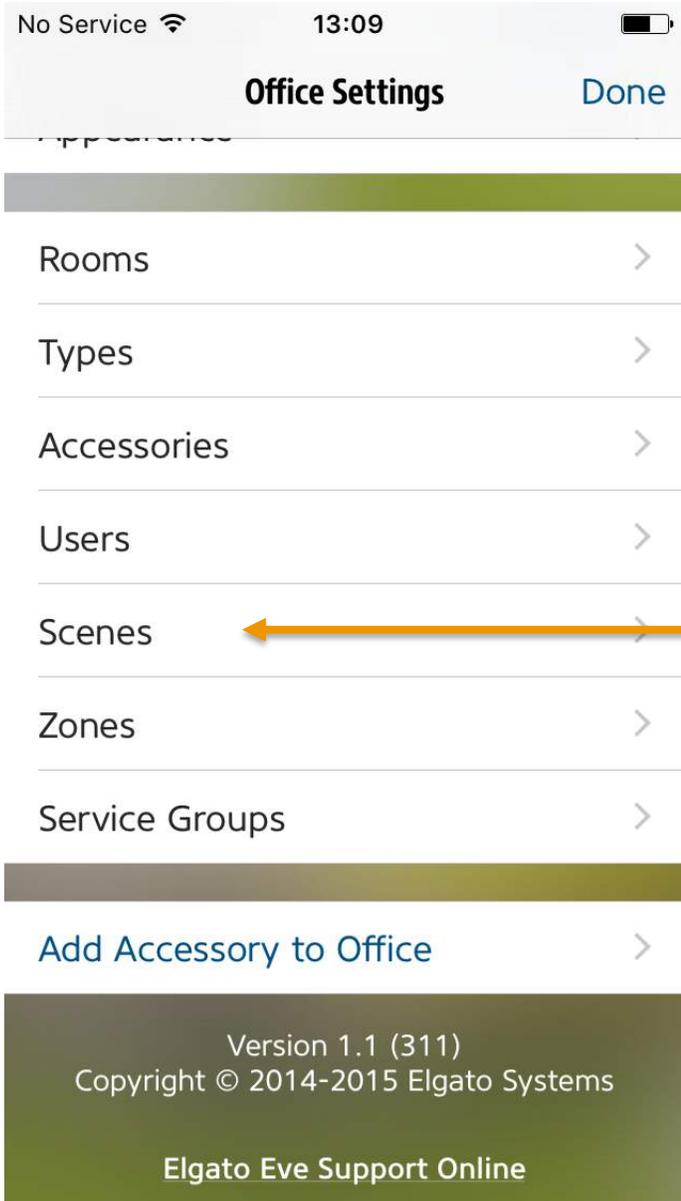

Continue to add the *Accessory* to your *Home*

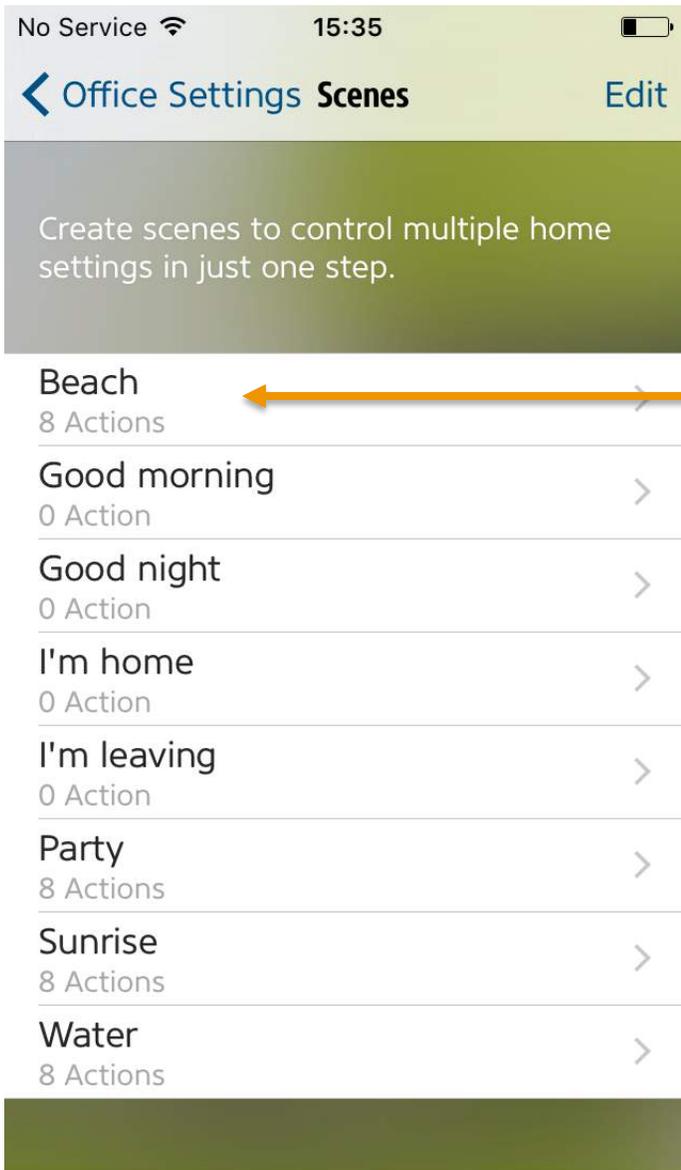

You have now added a new *Accessory* that can be controlled via HomeKit

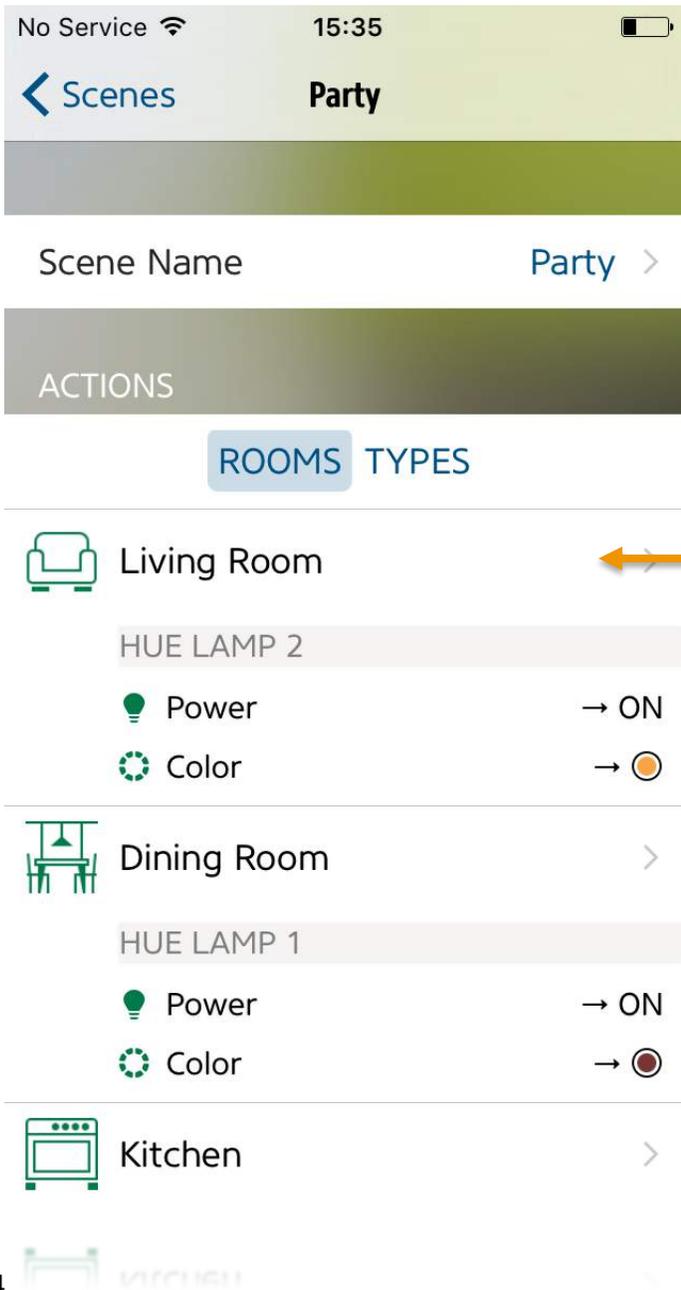

Next, we'll add temperature control to one of our scenes

Tap 'Scenes'

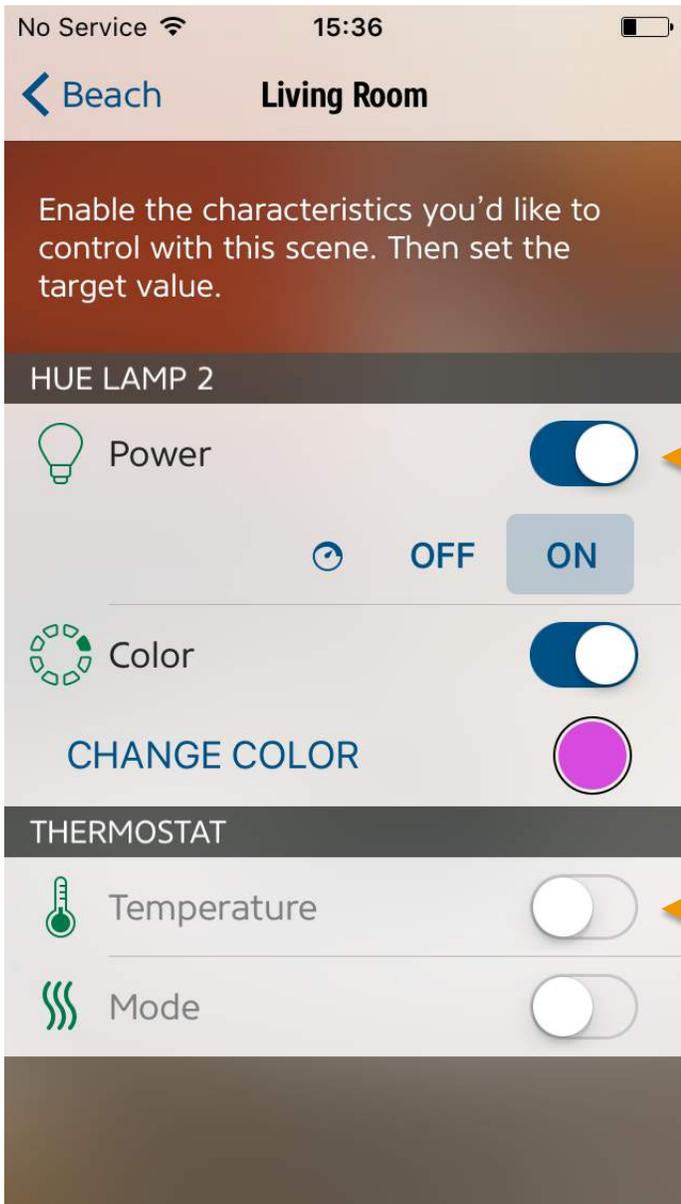

We want to change the temperature when we activate the 'Beach' scene.
Tap the scene to edit it.

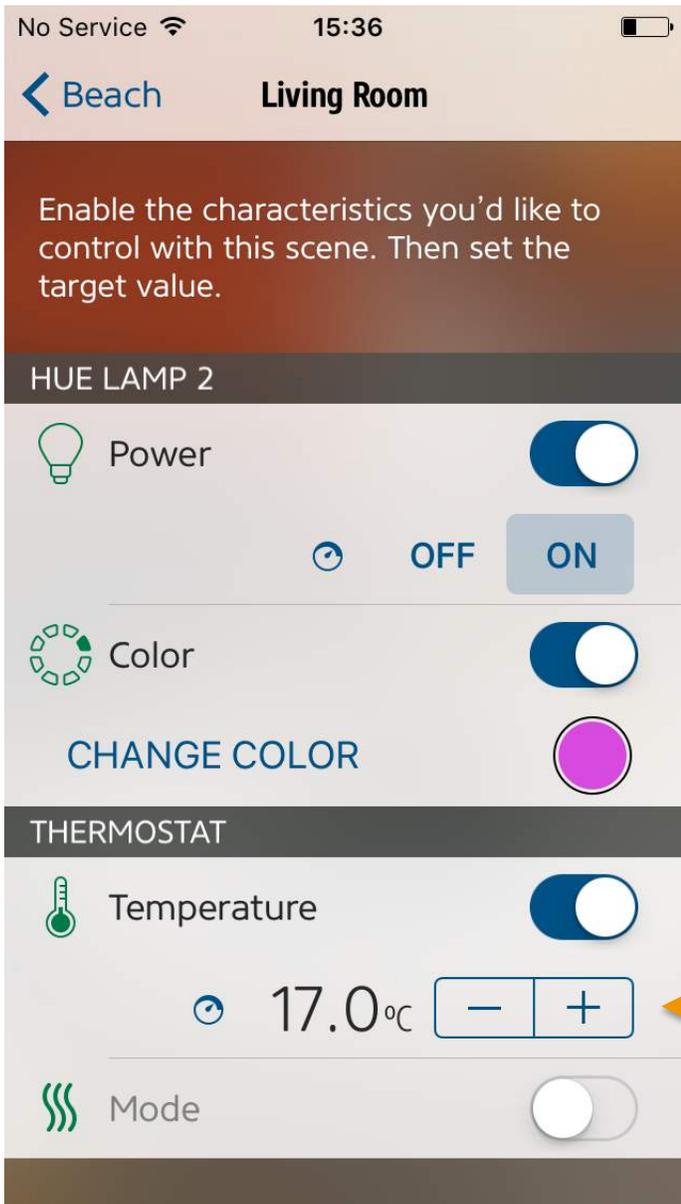

We added the thermostat in the Living Room

← Tap 'Living Room'

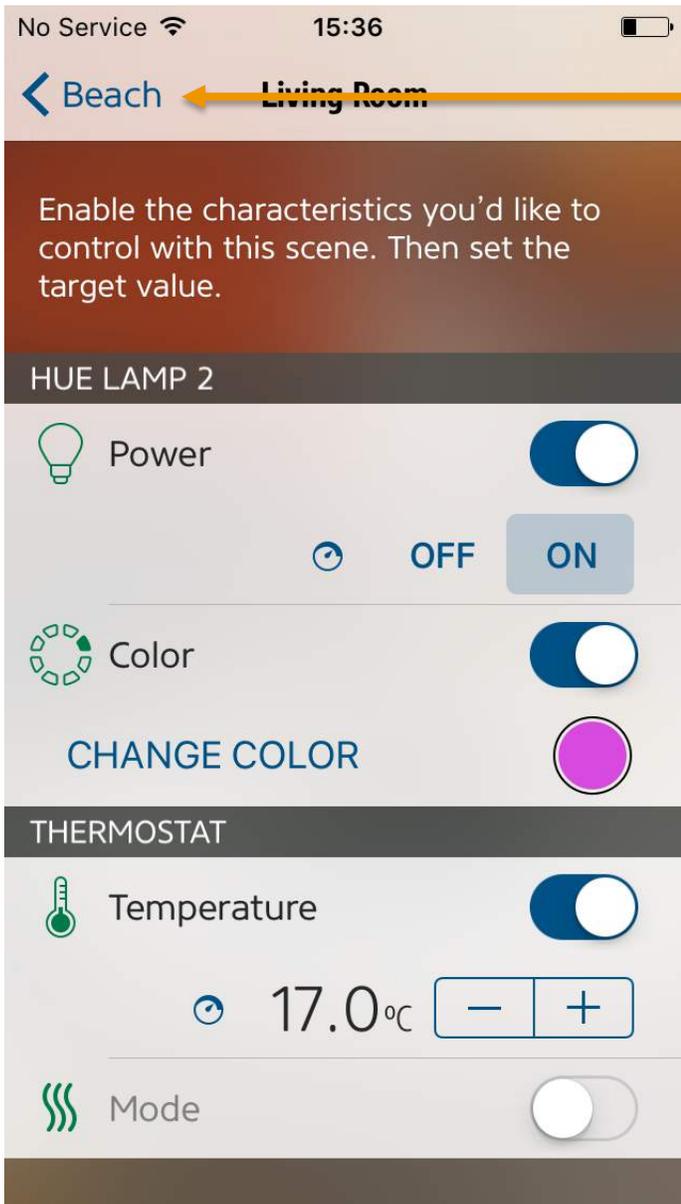

These actions already take place when this scene is activated

Enable 'Temperature'

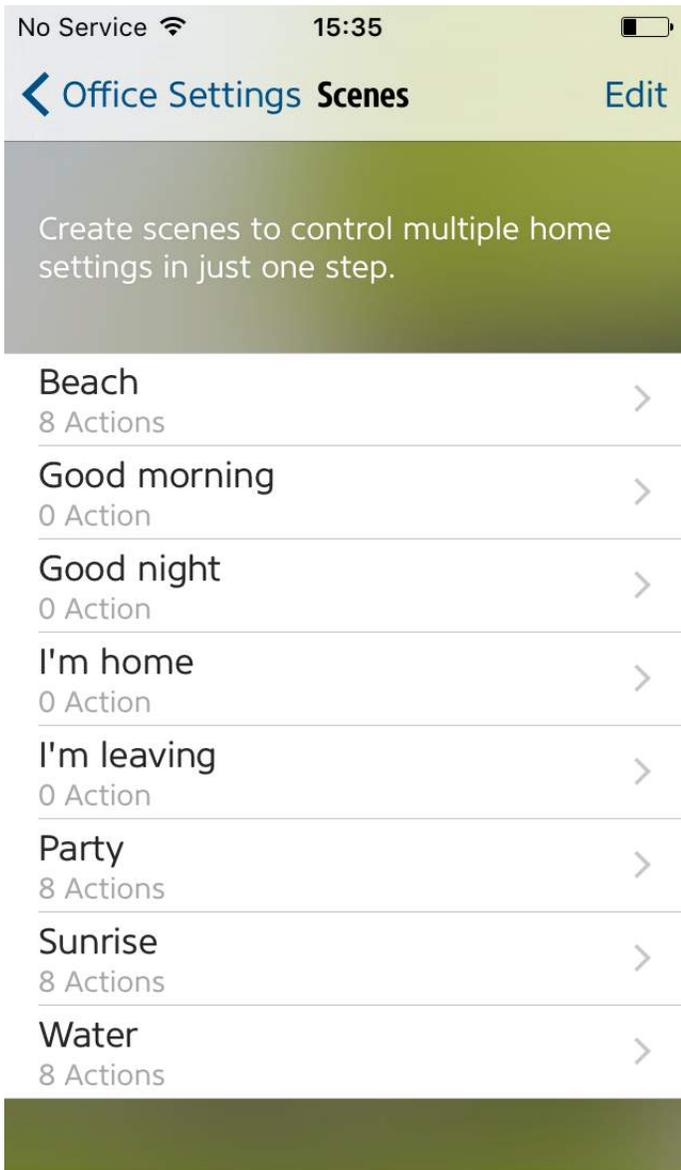

Specify the desired temperature

Tap back

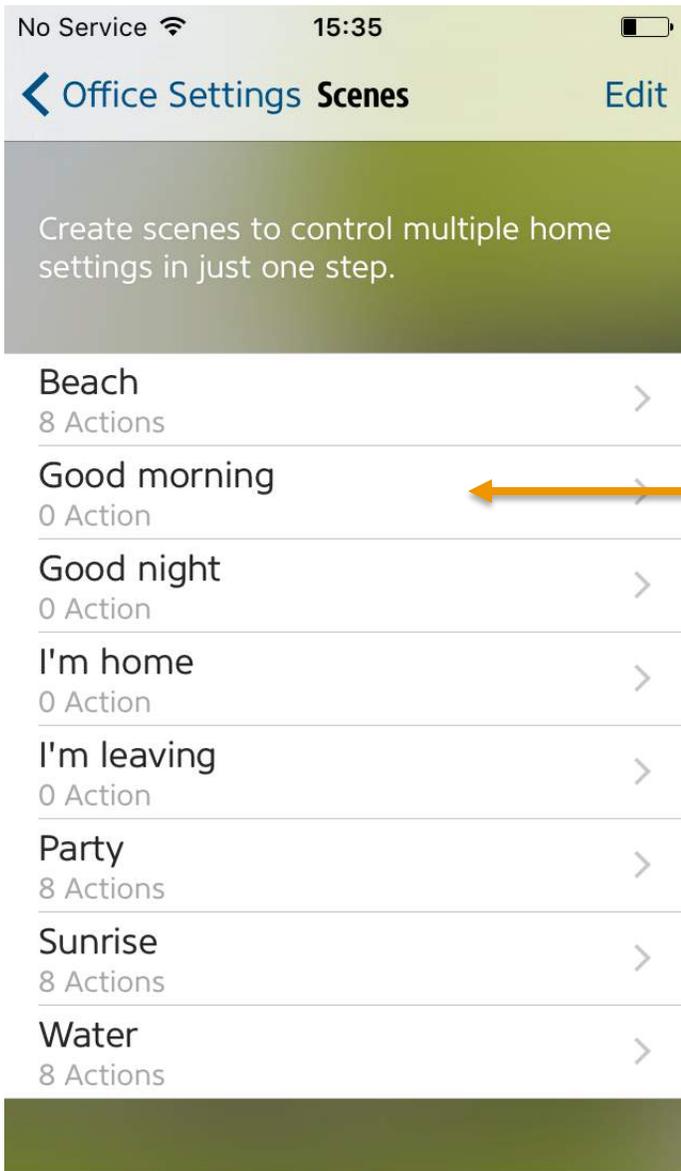

That's it!

When you recall the 'Beach' scene the temperature on your thermostat will be set to 17.0 degrees Celsius.

In the same way you can add Philips Hue lights to the default HomeKit scenes:

- Good morning
- Good night
- I'm home
- I'm leaving

Tap the 'Good morning' scene

Scene Name Party >

ACTIONS

ROOMS TYPES

 Living Room >

HUE LAMP 2

 Power → ON

 Color → 

 Dining Room >

HUE LAMP 1

 Power → ON

 Color → 

 Kitchen >

Select the room in which you want lights to turn on

Turn the light 'on'...

...and specify the desired color

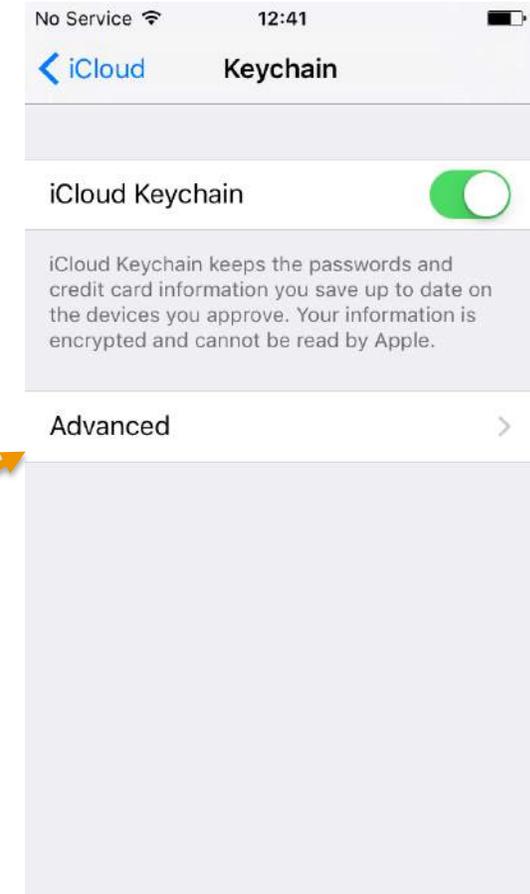

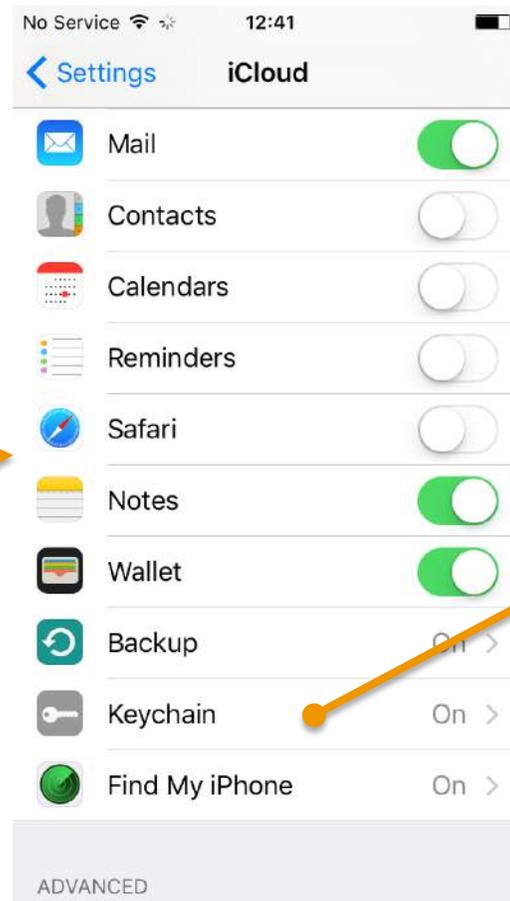

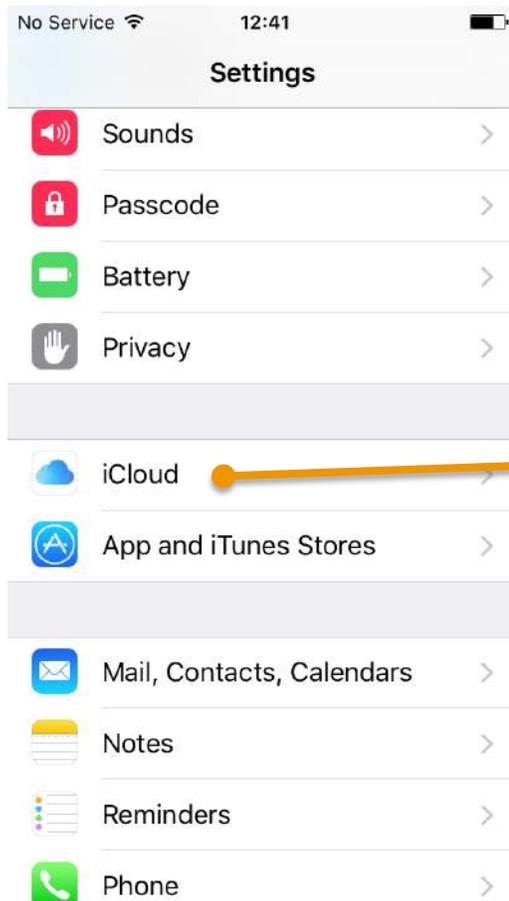

You can also add a thermostat action, so your Living Room is cosy and warm when you get out of bed!

Troubleshooting

Keychain Access

- You must have Keychain access enabled for HomeKit to work

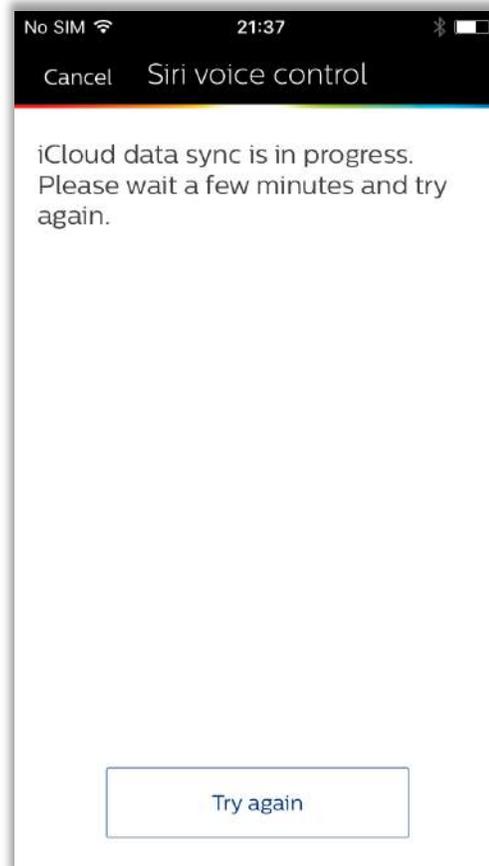

Siri needs to be enabled

- You must have Siri enabled (Voice Control is not able to control the lights)

Cloud Data Sync In Progress

- When using HomeKit, the following message can appear: "Cloud Data Sync In Progress". Message can last for several hours or even days. We are in communication with Apple to resolve this issue.
