Lifecycle Services
for GreenWarehouse

Light your industrial site **your way**

Philips Lighting Services for GreenWarehouse

Upgrade your facility with on-demand lighting

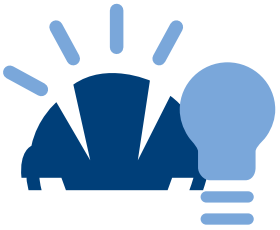

The way industrial businesses work is changing. With tighter shipping deadlines to service a global market, many facilities for manufacturing, assembly and storage have to be operational around the clock. As a result, having worry-free lighting at your site is now more important than ever.

To guarantee worker safety, many industrial sites are now fully lit 24/7 – an inefficient and non-sustainable practice. But thanks to GreenWarehouse, you can now enjoy on-demand lighting, exactly where and when you need it.

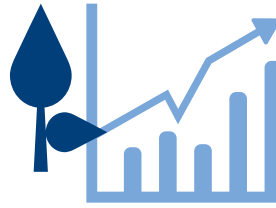

Your lighting, your way

GreenWarehouse is a flexible lighting system for new build or retrofit projects – simply replace existing luminaires point for point and add wireless controls. Your facility is divided into different zones, and the wireless controlled system delivers high-quality lighting on-demand, when and where it is needed. This lets people and vehicles move around safely at all times. When a space is not being used, the lights automatically dim to an energy-saving background level.

Improve safety

- **Guaranteed excellent visibility**, even in high and hard-to-reach places
- **Safe light levels** for both people on foot and those driving forklifts
- **Comply with industry safety standards** and government regulations for lighting
- **Automatically dim the light** to an energy-saving level

Achieve sustainability

- **Meet international energy standards** like BREEAM and LEED
- **Achieve energy savings** as well as maintenance cost reductions
- **Extend the lifetime** of your luminaires, with the right maintenance program
- **Reduce your carbon footprint** with smart sensors

Enhance productivity

- **Get more done in less time** with better visual performance and fewer outages
- **Improve your internal logistics** for fewer mistakes, errors and delays
- **Adapt and upgrade** your lighting installation to match zoning changes
- **Enhance workspace accessibility** for easy locating, picking and delivery

A brighter warehouse with lower energy bills

Staci Italia is a specialist in logistics management technologies. In 2015, they invested in a 24,000 m² warehouse. They wanted a lighting system that would significantly reduce their operating and maintenance costs, while complying with all relevant regulations.

Experts from Philips Lighting partnered with the 9Ren Group, who managed the project, to implement an innovative solution:

GentleSpace gen2 with the GreenWarehouse wireless control system. Based on Staci Italia's needs, a lighting plan was designed, including the creation of lighting zones for work areas and wireless controls to minimize energy consumption. When a zone is not being used, the lights automatically dim to save energy.

“ We've achieved our goal in terms of energy savings and, just as importantly, **we've created an environment that protects our workers' health.**”

– **Daniele Conti**, Staci Quality and Business Processes Engineering

Lifecycle Services

Extend the life of your lighting installation

Philips Lighting Services for GreenWarehouse

Industrial lighting is a business-critical investment. Philips Lifecycle Services ensure all your luminaires, sensors and software up to date and in perfect working order. We want to give you the peace of mind of knowing that your lighting is in good hands, every single day. That's why we developed two Lighting Services packages that complement and support your GreenWarehouse installation. Let us take care of the lighting, so you can carry on with your business.

Philips lighting services for GreenWarehouse

Essential Package

Protect your investment

Philips Essential Package will help you safeguard your investment, extend the lifetime of your facility's lighting installation and minimize maintenance interruptions.

- **Preventive annual health checks** keep your GreenWarehouse system working perfectly, with proposed corrective actions to prevent issues
- **Zoning and system settings** are annually verified and updated during health checks
- **Support** via telephone or email for any questions concerning your GreenWarehouse system

Premium Package

Hassle-free operation

For more peace of mind and even better control of your facility's lighting costs, the Premium Package includes everything in the Essential Package – plus:

- **Corrective maintenance** for all failures to maximize the availability of your GreenWarehouse system, including spare parts and installation during scheduled maintenance visits by our technical experts
- **System reconfiguration** so you'll always have the right settings and maintain lighting comfort for your employees, in line with changing needs in your facility's space
- **Electronic documentation** for your entire lighting installation lets you go paperless and makes sure you will always have fully up-to-date information for all maintenance activities
